

Dottime

Cosy number for linguists

WE in the computer business are often accused of trying to turn everything in the world into numbers. Well, now I can reveal that we are not the only culprits. A civil engineer I know who works for Ove Arup let slip to me that the conversation around her office consists almost entirely of numbers these days.

It seems some time ago they realised they were talking largely in clichés, and so to simplify things they drew up a list and gave them all numbers. It is surprising how few phrases will do to suit most occasions. For example: (2) Oh my God! (9) Pass. (13) Don't give me that! (19) That's true, that's very true. (23) Pas de problème. (27) Do be awfully careful. (30) Over the top! (39) PDQ (Pretty damn quick). (52) I'm pretty laid back about this.

Lots of offices develop their own private language, of course. Has yours? In a lab where I once worked, the inevitable answer to the question "How do you do such and such?" was "With considerable difficulty."

At MIT a few years back people would talk in numbers quite naturally. (For all I know, they still do.) You would hear people say "I'm going down to 50-340 at 10:30 to do a 6.41 run on the 7094," and it would sound perfectly normal.

(Let me translate for the uninformed, 50-340 is a building and room number. 6.41 is a course in the Electrical Engineering department (6): "Introduction to

"When I hit bottom, I thought that at least I'll never be squeezed out by automation."

Electronic Computers". If you don't know what a 7094 is, your youth is showing.)

One undergraduate got me into the envelope apart from two numbers: his student registration number and the post code thus: 631470 02139

and he got it! Apparently it arrived at the Cambridge, Mass. post office where they said, "Oh, some clown at MIT," and sent it round.

Favourite number?

TALKING of numbers, it seems the computer world is fast running out of them but when it gets hold of a good one, it just won't let it go. In perhaps unconscious obedience to Britain's most successful and beloved computer lins yet, new 1980s are bursting out all over.

The Storage Technology 1980 is a series of rack mounted tape drives, while Klenzia has chosen the name for its new low-cost office computer. And then there's the Olivetti 1900, better known among the cognoscenti as the Microdata Express. I'm colling my new TP monitor George.

Unacceptable face of DP

AS others see us: Recently, the Guardian's cartoon strip on the Women's Page, "The Silent Three", quoted a young lady thus:

"You know, I met a bloke the other day, who was really quite O.K. ... Well ... he wasn't much cop ... computer systems analyst ... rather weedy looking ... a very ordinary bloke."

Oh, well, back to finding another career. I suppose we could try being airline pilots, or oil company executives, or international jewel thieves. Mind you, somebody in a pub once told me I looked like a chartered accountant. Is that better or worse than being a weedy-looking systems analyst?

Life on the ocean wave...

...in which our intrepid

Rory Johnston becomes an

Informatician

YACHT racing has been compared to standing under a cold shower tearing up five pound notes. Having taken part in the second Coupe de l'Informatique, the French computer industry's four-day race around the Gulf of St Malo, I can confirm that when the wind is howling away at 30 knots, and the raft is pelting down, and you have your legs dangling over the weather rail with seas breaking over you, you are sorely tempted to agree with this view.

The race was organised by AFIN, the French equivalent of the BCS, and taking part were 48 yachts sponsored by a wide range of firms such as Logabax, Cisl, CGS, and Europe Informatique, as well as such well-known French companies as Control Data, Digital Equipment, ITT, and Data General.

Representing the Rest of the World's computer industry was one crew consisting of three old salts from Manchester-based software house Master Resources, a sail-maker friend of theirs, and yours truly, hastily appointed Computer Weekly's yachting correspondent.

Our boat was a spanking new

28-foot sloop called Oxygene, with a French skipper. This caused us some trepidation beforehand. "What on earth is the French for 'clew outhaul'?" we wondered. In the event the skipper spoke English but several times he forgot it in the heat of the moment and would point frantically, shouting "Pool ze zing! Ze zing under ze boom!"

Despite this we didn't do badly, avoiding the blunders of several crews who merrily sailed the wrong way round buoys, and so on.

The first day's leg, from St Malo to Jersey, was the most frantic: A reach with winds varying from 15 to 30 knots, reefs going in and out all the time, and your reporter feeling distinctly green about the gills. "Why don't you steer around the

bumps, Glynn?" was a frequent complaint to the helmsman, who replied that at least he was staying out of the holes.

The second day's run to Granville from Jersey, with the wind aft and the spinnaker up, was a lot more tranquil, but still the sun refused adamantly to shine. The third day's racing was called off, owing to forecasts of force eight gales and "mer agitée," but as luck would have it the sun shone for our sightseeing in Granville.

The final leg back to St Malo was close-hauled with plenty of wind and rain, prompting someone to say, "You know there are people who wouldn't understand that this is pleasure." In the final results, I can assure you that the Rest of the World was not disgraced, as we came 14th out of 31 boats in our

unmeasured (not handicapped) class. Situ coming first.

Control Data was winner of the measured class, beating the real star of the race, a huge, beautiful former America's Cup contender named Aquitaine, entered by CII-HB.

Despite not placing, we were generously presented with a special prize for having defended the Rest of the World's honour — a medal and certificates conferring on us the title of "Informaticians."

Master Resources is thinking seriously of organising a British equivalent race for next year, and would like to hear from any one in the industry who would be interested. Contact Noel McLean at Langley House, Stanneylands Road, Wilmslow, Cheshire SK9 4HA. Tel 09894 32127.

Amdahl impacts big systems

From front page sophistication, which means that support costs are likely to be less than for mid-range manufacturers, and the easy identification of potential customers, which gave the company a formidable return of \$4 million per salesman in 1978.

The principal threat on the Amdahl horizon is the forthcoming IBM 303X replacement line, the H-series. But even this could well work in Amdahl's favour, according to the report.

Although some observers expect the first H-series models to make their debut this autumn for delivery in late 1980, Paine Webber believes that IBM may still be under-estimating the demand for its latest products. If so, a bigger than expected backlog for 4300s would inevitably delay the introduction of the H-series, giving Amdahl more

breathing space to develop its next generation. The long delays on the 303X machines actually boosted Amdahl's business since it could offer better delivery dates. Meanwhile they forecast an Amdahl 470V/9 before the end of the year.

In the mid-range of the mainframe market, Paine Webber sees a tough time for all IBM's competitors, both compatible and non-compatible. Manufacturers like Magnuson, Citel and Nanodata are still in the start-up phase, and may well find it difficult to raise more capital following the 4300 launch. Meanwhile now that it is so cheap and straightforward to design a machine to run almost anyone's system software, the traditional mainframes like Burroughs, Honeywell and PCL are likely to come under PCM attack.

Paine Webber believes that an inexorable shift towards IBM-compatible software throughout the industry is under way — which echoes the view of Gene Amdahl (CW, December 8, 1977). They forecast that by 1983, the combined value of installed IBM-compatible CPUs in the middle and large mainframe market will have overtaken that of the installed base of every other manufacturer, estimating IBM's share at 64%, that of the PCMs at 11%, and that of Honeywell, at present the world number two, at about 71%. Only Burroughs and "others" (presumably ICL, Siemens, Nippon Electric) are forecast to increase their share from its present level. They cite the 370 emulation

facility which Univac offers on the 90/80 as a pointer to what other manufacturers will have to do, and in this context, it will be interesting to see whether Univac incorporates IBM compatibility right through the line it is preparing to announce at the NCC as the 310-series successor (CW, March 15).

At the bottom end of the mainframe market, they see a problematical future for the minis, with four PCMs in particular causing trouble.

The four are Two PL National Semiconductor with the System 400, Cambridge Memories with three unannounced machines, and Interdata with the Kargolis "Duo" 370 emulator on the 7/32 and 8/32 minis.

Intel FAIR

Learn more about Microcomputer Technology from World Experts.

Attend the Seminars — we give you four to choose from.

Visit the comprehensive exhibition to meet our distributors and see our customers' applications.

See the latest Microcomputer Software in the Video Demonstration Theatre
Stroll down the Application Arcades. Star Attractions Include:

A 1 megabit Bubble Memory. This is our first bubble memory and is the world's largest. We will be demonstrating this device and will give full details.

8086 8-bit Microcomputer. This is a new device which employs the same architecture as our 8086 16-bit microcomputer and is the world's highest performance 8-bit microcomputer.

8089 I/O Controller. Another new device which allows mainframe I/O handling techniques to be applied to the microcomputer.

First demonstration of a new compiler.

The first Intel Fair was held in 1976 and it has grown in size and stature every year to become one of the most significant events in the diary of the microcomputer engineer and project manager. Intel Fair '79 will be no exception to this rule offering, as it does, four simultaneous seminars, an exhibition and a video demonstration room.

A visit to the Fair is an excellent way of up-dating yourself on the latest developments in microcomputer technology and actually seeing some of the latest applications. We will be announcing and providing details of four very significant new products at the Fair. They are the world's first 1 megabit bubble memory device, the world's most advanced 8-bit

microcomputer, the first I/O controller which enables mainframe peripheral handling techniques to be applied to microcomputers, and a new COBOL compiler.

Many of the seminar papers will cover applications, and there will be special presentations for the Process Control and Data Processing engineers in addition to a series of papers for newcomers to microcomputers.

Visitors to the Fair will have every opportunity to follow their own individual interests and will be able to discuss their design problems with experts from the UK and from Europe and America, who are coming over especially for this event. Customers who have developed a microcomputer-based product will be presenting

papers at the seminars and will be demonstrating their products at the exhibition. This provides an excellent opportunity to discuss the experiences they had in bringing their products to the market place.

The main objectives of the Fair are serious. However it is, after all, a Fair, and we try to promote a 'fairground-like' atmosphere with some occasional light relief. It is an ideal opportunity to meet people who can advise you, if required, or who are in a similar stage of project development as yourself. So come along! Meet us, meet our distributors, meet our customers, learn a great deal, and enjoy yourself in the process.

Intel Microcomputer Fair '79 Wembley Conference Centre June 11th 1979

Brewers to market vehicle software

A VEHICLE maintenance system, developed by Allied Breweries for its own use, is to be marketed by the company both as a package and in the form of a bureau service.

Called Abcas, the software provides regular detailed information on the running of each vehicle and is said to be applicable to any fleet operator maintaining more than 50 vehicles.

Among information provided is the type and frequency of any repairs; fuel consumption; and details of servicing. A key section is an exception report highlighting such things as servicing irregularities.

Abcas is said to have saved Allied £8,000 a year when applied to its fleet of 5,000 vehicles, and will be sold for in-house use for £10,000. Alternatively, Allied will run the software as a complete service for clients at a cost of 00p per vehicle per month.

GILB'S MYTHODOLOGY

Data collection forms pollute DP systems

COMPUTER input data collection forms are so common and traditional as to be above question. We force various innocent people to fill in these forms, and thus make them accomplices in the pollution of our own data processing systems.

It is commonly believed that the forms somehow add speed of processing and reliability to the data collection and data entry process.

I should like to argue that this is no longer true. It may have been true, some decades ago. It may even be true in limited instances today. But in a large number of cases where we are using a form, we are really miasing it, and doing

our own reputation a disservice.

The main difference is that the cost and practicality of automating the functions of a form have vastly improved in favour of the computer.

First, practically. What is a data entry form? I have managed to identify in my own mind three main functions of the form. To instruct us as to a particular sequence of input data. To instruct us as to a particular format, a "standardised" format. To instruct us as to what constitutes a complete set of input data elements.

In short, the form is a program for people. I suggest that all these functions can and should be automated. They can

be automated by getting those who fill in the forms to key in natural data formats, in the natural sequence in which they occur, and to get the computer to remind people, sooner or later, about the missing needed data elements.

In one sense, we are talking about an automated form, and a "smart" form. We are also talking about the elimination of a whole traditional work process, of filling in paper forms. We shall have to spend much more effort in the design of such systems. Many present forms reflect on a lack of serious design effort. And we shall have to write more sophisticated programs to handle the intelligent form.

I know the mere thought of writing more program code has the effect of scaring programmers. Into using the traditional data entry form. To save an hour of programming once, some would gladly spend several work-years of the office staff's time.

But we must pluck up our professional courage and make more use of the tools which fate has so generously placed in our hands: the ability to design programs and the machine to execute them.

The form functions should be automated because it will normally result in a faster processing of data from source to correct machine readable format. They should be automated because computers are more reliable than humans at such work. They should be automated because computers are cheaper, in most countries, than qualified human beings.

The microcomputer technology gives a strong impetus to this kind of change.

The art of designing away the form is not very difficult, but few of our designers have received any training to do it. Very few have clear motivation from their environment to attempt it. It is not traditional, and tradition is stronger than common sense. Once designers are motivated and trained, it is really a simple process of automating the work previously done by humans in looking up codes, converting date and amount concepts to standard digital formats, and identifying the meaning of natural data elements.

One of the tools which make possible the elimination, or at least the strong simplification

of traditional forms, is the possibility of access to a database during the data collection process. The possibility of interactive dialogue and instruction from cheap microprocessors, perhaps coupled with equally cheap secondary storage for programs, files and instructions, adds substantially to the viability of form elimination.

But it would be a mistake to presume that database technology, microcomputers or interactive capability are necessary prerequisites for the elimination of the form. It can be accomplished to a large measure without these tools. Lack of them should not be an excuse for not trying to automate the forms function to a greater degree.

Ask yourself the following questions:

1. Could we benefit substantially if our forms were reduced, simplified or eliminated?

2. Have we taken steps to ensure that our designers (analysts and programmers alike) really do know about and master the techniques for automating the form functions?

3. Does management set specific goals for our projects related to human productivity in data capture which will force us to make use of such technologies wherever they are viable? Have we made it clear to management that an investment in this area of automation will pay dividends in terms of productivity, accuracy and speed of data capture?

Puzzler

THE square-based pyramid (right) has five vertices and eight edges. Can you label each edge with a different number from 1 to 10, in such a way that the sum of the edges meeting at each vertex is a constant of 18?

There is only one way to do this, not counting rotations and reflections.

See page 43 for solution.

SOFTWARE FILE

Informatics' distributed DP support for PDP-11s

HAVING discreetly smacked a worldwide user base of 60 for its PDP-11 product Series IV, Informatics has revealed that the software now provides comprehensive support for distributed processing on minicomputer networks.

This it does with a sophisticated set of tools enabling even end-users to build linked interactive applications in an environment also including RSX-11M and DECnet.

As an illustration of the power of the system, Informatics cites one user who built a complete cargo loading and tracking application using Series IV facilities alone.

Although initially restricted to the PDP-11, the software may later be adapted to other minicomputers.

Series IV was originally announced 18 months ago as a data entry validation package for the PDP-11 (Software File, September 28, 1977). A key feature was the ability to implement a complete data entry application using a parameter language,

without any conventional programming.

With release 5, data validation and entry (DVE) has become just one of three components of the package, which also includes a transaction processing system (Series IV/TPS) and software for distributed data processing (Series IV/DDP).

Required on each minicomputer in the network, DDP appears to provide many of the same functions as IBM's 8100 software, catering in effect for strict centralised control over a distributed application network.

When linked with Series IV/TPS, it allows applications to communicate not only with each other but also with IBM mainframes. Both 2780 and 3271 protocols are currently supported and central files can be updated on a daily, hourly, or online basis.

TPS itself is described by the company as "much more than a TP monitor" and is said to "facilitate local development and implementation of screen-oriented applications".

It supports up to 32 terminals, all of which can be running different applications, and its constituent real-time executive is also an integral component of DVE.

Because all the Series IV products run under RSX-11M, applications built with them can be freely interfaced with existing or conventionally developed applications. There is also an interface to the Total DBMS.

However Informatics sees most PDP-11s as already fully loaded and expects most purchasers to install new hardware at the same time. Indeed it may well go into the business of supplying complete hardware/software systems, probably in conjunction with a systems house.

Since Series IV first appeared, it notes, the launch of the LSI-11

has halved the minimum hardware cost of a complete system could be bought for as little as £25,000.

Prices of the software alone are around £15,000 for TPS; £13,500 for DVE; and £7,500 for DDP. DVE is included in the price of TPS and quantity discounts are offered on all three components.

Earlier meeting

PRESSURE of work on the ANSI X3J4 Cobol committee during its first meeting in London, has obliged the BCS Cobol specialist group to re-schedule its evening meeting on May 23 from 6.30 to 6.00 pm. George Baird, manager of the US Federal Compiler Testing Centre, is to give a progress report on Cobol compiler validation. The meeting will be at the Clifton Hotel, Welbeck St. W.1.

Prices, release dates for Cincom's TIS

CINCOM fleshed out its plans for TIS by announcing prices and release dates at its eighth international user conference, held in London.

Attended by over 250 of Cincom's 450 direct European customers, the meeting included the first European presentation of TIS, which was launched by the company in the US last year.

Release 0, it was disclosed, has been in beta test at US sites for some months now, including Johns Mansvill and the Orange Coast Community College. Cincom is to begin installing release 1 this month in the US, and will make the software available to selected European customers at about the end of this year.

This release will be restricted to OS and Environ/ users and will include the directory; batch and online query facilities; TIS comprehensive retrieval; communications management and communications monitor. It will be available on un-

limited release — referred to by the company as "absolute general release" — around the middle of next year. TIS Query — the successor to T-ask (Software File, June 15, 1978) — will then be available in French and German versions in addition to English.

Meanwhile release 2, which will include all announced TIS facilities with the exception of the update preprocessor, should make its debut around spring 1980, and will be available in Europe about six months later.

Only two prices have so far been mentioned by Cincom. The minimum purchase giving basic batch DBMS facilities and the directory will cost about £50,000. The complete product will cost about £140,000.

For its first customers, Cincom will be looking to experienced Total users already skilled in data resource management and probably making full use of the data dictionary.

Quality impressions are made easily with OEM band printers from CDC

If you're an OEM, you already know what Control Data has done for disk technology. Now we're determined to earn the same reputation for excellence in band printer technology. By giving you versatility and maintainability. By giving you customer reliability, superior print quality and economical operation.

Engineered for component commonality. All three members of our 9380 family of band printers look pretty much alike. Inside and outside. So your servicing, training and inventory requirements are simplified. Yet you can choose from three print speeds, 69 print bands and lots of other options.

Built with the features and economy to attract end-users. Our 360/720 lpm models offer a compressed pitch option. That saves your customer money in paper expense. And gives him the capability to print 132 columns on standard 8 1/2 by 11 inch paper. Bands switch in seconds. Paper loading is easier. Operator controls and adjustments are minimal. And your customer will like the clean, crisp impressions delivered by our proven hammer technology.

Put quality behind your nameplate

Let us send you data sheets and print samples. Call us on 01-930 7344. Or return coupon to:

Colin Keighley, OEM Sales Manager,
Control Data Limited,
22a St. James's Square, London S.W.1.

Please send literature and sample printouts on your band printers.

PROGRAMMER NOTES

Raising productivity with report generators

PROGRAMMER NOTES has in recent weeks argued that program generators could have an increasing role in improving productivity. Another option open to the hard-pressed DP department is the use of a non-procedural report generator package.

Packages of this type have been available for some years, well-known examples including CA-Earl, Mark IV, Easytrieve, and Quik-Job. Depending on DP policies and the usability of the software, they may be made available either to DP staff or to end-users, or to both.

However the traditional mistrust of new higher-level tools — particularly the suspicion that they may be too restrictive or inefficient — has to some extent held back their acceptance.

In the light of the productivity crisis, though, an increasing number of installations will find some such tool essential. So it was interesting to receive a summary of an evaluation exercise recently carried out by one — anonymous — company.

Carried out prior to installing Pansophic's Easytrieve, the main purpose was to obtain

some form of comparison between Easytrieve and Cobol. Two secondary objectives were to determine the potential scope for Easytrieve applications and to see how quickly it could be learnt.

Three user departments were selected at random and asked to provide details of reports which they could not currently obtain, but which would prove useful if they could be supplied at relatively short notice.

In each test case selected, the team studied factors including coding time; number of source statements; source code and JCL preparation time; testing and debugging time; and learning.

What appears to emerge from the limited information provided is that while dramatic savings are possible for simple jobs, for more complex jobs the savings are rather less impressive.

One job, for example, that took 332 Cobol statements was accomplished using Easytrieve in 8. The total time taken with Cobol was 8 hours 45 minutes as opposed to just 58 minutes with Easytrieve. Much of this saving was achieved in code preparation and verification, which took 3 hours 40 minutes for the Cobol and only 4 minutes for Easytrieve.

However in the case of a more complex report, a 352-statement Cobol program was replaced by as many as 140 statements in Easytrieve. The respective development times were 7 hours 25 minutes using the former and 3 hours 9 minutes using the latter.

While the summary available permits no deeper analysis, the discrepancy probably reflects the fact that all report generators have distinctive strengths and weaknesses. Not every processing job will be handled easily by a particular generator, and some may not be amenable to any generator.

The moral, therefore, is to choose one, if possible, whose capabilities are best matched to one's own habitual retrieval needs.

CDC SOVEREIGN knows how to communicate

See demonstrations of CDC SOVEREIGN and CDC Really Royal plus the business and manufacturing control packages at:

Inn on the Lake Hotel, A2, Shorne, Kent 5-6, 7 June

Lorne Hotel, Glasgow (Sauchiehall Street) 13, 14 June

Moat House, Basingstoke 25, 26 June

Post House, Southampton 27, 28 June

High-speed data entry, efficient data base management, high level language user programming and comprehensive data communications all on one system — that's the beauty of Multiplex Processor Keying.

SOVEREIGN's MPK architecture permits communications with any number of mainframes, remote terminals or other DP systems together without affecting other DP activities.

Based on a communications network on CDC SOVEREIGN and data can be entered and validated locally and batched for transmission to main-frame while reports and print-outs are

being received from the computer centre. Powerful software will enable SOVEREIGN's Processing Terminals to emulate a variety of batch and transaction terminals within such a network.

OP SPOT

Opcomm's ex-chairman breaking new ground

RUSS BEVAN, former chairman of the now disbanded operators' group, Opcomm, has left the Coventry installation of Rolls-Royce, and is now employed in the management services division of Rank Hovis MacDougall as a facilities manager, a position on a par with that of operations manager.

Bevan is currently being trained to take over the running of one of RHM's bakeries, which have ICL 2903s together with

7502 terminals.

After his initial training, Bevan will be involved in relief work — moving about the country, covering RHM site managers who are on holiday or away for other reasons.

"As soon as a vacancy comes up, I will get a permanent installation on my own. I'm hoping to get a brand-new site. That would give me the opportunity to get involved in site planning, recruitment, etc."

Rigours of shift work

MANAGEMENT should take more care when deciding upon the shift pattern their operators staff are to work. And operators should be given medicals regularly — every three or six months.

I wrote this after talking to an operator who gave up shift work on the advice of his doctor who described him as being in a state of "permanent jet lag".

The "Continental" shift pattern he worked involves working two day shifts, followed by two evenings and three on nights. Then comes a two-day break. The next rota consists of three day shifts and the one after that of three evenings.

● Shift work is a very important subject and I would like to hear your views on it.

What ops wear doesn't affect equipment

"I HAVE no knowledge of the equipment used at the 'Ernie' site, but if I were to win I'd accept the way line cheque willingly."

Thus Dave Miller, a shift leader at the Bristol installation of the Imperial Group, responds to a letter on operators and dress from Barry Denyer of Lloyds Bank in Worthing, Sussex.

In essence, Denyer had argued that dress reflects the attitude of the site as a whole. He wrote: "Having a letter from 'Ernie' the

other day containing some Premium Bond winnings, I was absolutely amazed at the way line printing. I would imagine that the operators who produced the document don't hold with the 'collar and tie' idea."

Comments Miller, "His last paragraph left me feeling that he hasn't been operating long, or has been lucky enough not to work with printers similar to the ICL 1933 type where print is produced by a revolving drum."

"We had two at my site for several years, and towards the end of their life we were unable to get anything other than 'way line' print from them regardless of the time we spent setting them up, or the amount of time and trouble the engineers spent on them."

"I think that I can also say quite definitely that the print quality didn't vary when I wore a suit on the day shift, or casual clothes on lites."

Inter-shift competition is often counter-productive

ASK an operator to compare the two or three shift teams of his installation and he will almost certainly talk in glowing terms about his own, while pointing to the shortcomings of the others. Ask for details, and he will mention how good his colleagues, particularly his senior colleagues, are from a technical viewpoint, and say that they always do the work more quickly and efficiently than the others.

Now some might consider that such loyalty, and the competition that often exists between shifts as a result of it, is good — but I am inclined to disagree.

In my view, operations staff should consider the installation as a whole, and both communicate and co-operate with the members of the other shifts. Relations between shifts are often good at the smaller installation, as instanced by a site where I was once employed as an operator. We worked a two-shift system, with two operators per team.

Both teams would try to get as much work as possible processed during the day, and as a result the evening shift would often end well before the scheduled 11.30 pm finish.

Of course, there was the occasional disagreement, but on the whole both teams worked well together and it was not unusual for one of us to start the evening shift early in order to help out.

But at the larger installation, things aren't quite so good — often there is a complete lack of communication, or it exists only

in the form of bickering.

At one installation I know of, the end-of-shift reports were, and probably still are, for that matter, littered with petty little remarks about the printers or card readers not being cleaned properly.

And at handovers, the lack of co-operation between the two sets of operators often resulted in jobs being left on the input and output queues far longer than necessary, and incomplete listings being returned to the user.

When relations between shifts are poor, the operations manager must involve himself by calling his shift leaders together in order to discuss the matter.

In fact, such meetings should be held every two or three weeks, anyway. And it is a good idea to include one or two operators from each shift so that they can have a say in matters affecting them.

Another way of improving relations is in swap operators between shifts for two weeks or so.

HINT OF THE WEEK

Adding comments to the hardcopy log under IBM OS

THIS week, the hardcopy log is the subject of a hint from Colin O'Keefe, assistant operations officer at British Airways in London. He explains how to add comments to IBM OS command.

He writes, "This is very useful for the operator when he takes over the console from one of his colleagues. By looking at the hardcopy log he can, for example, find out why a job was cancelled or why a certain tape drive was taken out of operation."

According to O'Keefe, this is achieved quite simply by tagging the comment on the end of the command when typing it in at the console. Both command and comment are then routed to the hardcopy log by the system.

He gives an example: C XYZTST, DUMP, TRYING TO FIX HANG

From this the operator can tell that the job called XYZTST was cancelled in an attempt to clear a system hang.

By Bernard Allen

WP user group to stimulate training

A NEW word processing user group is to try to stimulate increased education and training in the operational and management skills needed to exploit computer-based office information systems.

There is currently an acute shortage of word processing operators, and the public and private educational community is failing to meet the growing demand, according to Hugh Channon of Arthur Andersen & Co, chairman of the user group, the UK branch of the US-based International Word Processing Association.

The president of the IWP, Erv Steilman, who was in London last week to inaugurate the first IWP branch outside North America, said that there was also a shortage of word processing staff in the US, but over 25% of further education colleges offered certificates in word processing and about 25% of secretarial courses up to high school level offered introductions to the concepts of the new technology.

Many of these courses had come about through the active participation of IWP members in "citizen advisory councils" which exist in some areas of the US to liaise between industry and the educational system.

Steilman claimed that word processing had also opened up new career opportunities in management and supervisory functions for secretarial and clerical staff.

The UK branch is the 54th in the IWP, which has approaching 7,000 members in the US and Canada and which expects in

the year was down 28.3% at Yen 44,548 million (£99 million).

The company has a payroll of Yen 83,575 million (£185 million) for 15,041 employees which gives an average annual salary of £15,373. This includes bonuses and welfare expenses.

AMDHL sales for the quarter ended on March 30, were \$87.5 million producing a pre-tax profit of \$24.5 million. Figures for the same period in 1978 were \$63.7 million and \$19.1 million respectively. The selling price for the company's computer systems were reduced by about 20% during these two years.

Chicly styled, the IBM Boutique, the store is the first of three planned for France this year; the others will be in Paris and Lille, and a total of 21 are planned for Europe this year. Main product to be promoted is the IBM 5110 desk-top computer, and the customers aimed at are small and medium-sized companies. The store will take orders for the machines rather than sell them over the counter.

HONEYWELL sales for the first quarter of 1979 were \$968.8 million compared with \$788.8 million in the first quarter of 1978. Profits after tax for these periods were \$59.8 million and \$35.4 million respectively.

NATIONAL CSS sales for the 13 weeks ending February 28 were \$23.2 million compared with \$13 million for the same period in

open an Australian branch soon.

Hugh Chapman said that there was an urgent need for users in the UK to have a body which represents their needs, provides an exchange of experience between those implementing and planning to implement word processing equipment and provides a link between users and suppliers of systems and services.

By becoming a branch of the IWP, Chapman said that the new group could immediately draw on the wide range of facilities offered by its parent body, which has been in existence since 1973, first as a group of the US Administrative Management Society and since 1977 as an independent, non-profit making organisation.

IBM Japan finds way to boost profits

THE higher profits achieved by IBM Japan during 1978 are attributed to the use of parts and components manufactured in that country.

In the 12 months up to last December the company reports sales worth Yen 315,343 million (about £700 million) showing pre-tax profits of Yen 69,858 million (about £150 million). This represents a 7.3% increase in sales and a 24.3% jump in profits.

New investment during the year was down 28.3% at Yen 44,548 million (£99 million).

The company has a payroll of Yen 83,575 million (£185 million) for 15,041 employees which gives an average annual salary of £15,373. This includes bonuses and welfare expenses.

USERS of ICL equipment throughout the world want to establish direct links with the company so that their needs can be dealt with more quickly. This was one of the points that came out of the first full meeting of the International Federation of ICL Computer Users Associations, held in Jersey.

The delegates felt that working through local ICL representatives resulted in slow and unreliable communication with the company in the UK. Next month the federation hopes to have a special meeting, most likely in Paris, when Les Gels, ICL's director of worldwide marketing, will meet the delegates to discuss the development of company communication.

At the Jersey meeting it was decided to hold a full conference at least once a year. The federation was set up in 1977 by a group of overseas users who visited the UK CUA conference at Scarborough. Last year at Eastbourne, the federation held a half-day meeting at the end of the UK conference.

The next full conference of the federation will be in May next year, although European members are thinking of having an intermediate conference this autumn.

UK representatives at the Jersey conference included Howard Wrigley, former chairman of the UK CUA, who is president of the federation, and the CUA chairman and vice-chairman, Jim Rethwell and Stuart Gould.

US users were represented by Frank Miles, a System Ten user, who is vice-president of Forum International, the group that covers users of Singer, TRW and ICL kit in the US.

● Or picture shows a line-up of the delegates at the Jersey meeting.

Decision on services to US

GRAPHNET and Telenet in the US are to be authorised by the Federal Communications Commission in Washington to offer facsimile and data transmission services respectively to Europe.

Authorisation was given in 1977 for a service in the out-bound direction only, but permission for the in-bound direction was withheld because Western Union International objected to its monopoly of international telegraphy being broken. The FCC ruled that this introduction of competition to domestic telegraphy had removed it, but WUI disagreed.

Objections from the other international record carriers, ITT and RCA, were removed when they went into partnership with Graphnet and Telenet. The latest decision on the case has come from the US Court of Appeals for the District of Columbia which has granted the new services a stay pending litigation.

FINANCIAL NEWS ROUND-UP

1978. Profit before tax increased from \$2.04 million to \$2.38 million for these comparable 13-week periods.

DATA GENERAL sales for the 12-week period ending March 17 were \$112.4 million compared with \$81.6 million for the same period in 1978. Profits after tax for these periods were \$12.2 million and \$8.5 million respectively.

PRIME COMPUTER sales for the 13 weeks ending April 1 were \$29.5 million compared with \$18.1 million for the corresponding period in 1978. Profits after tax for these comparable quarters were \$2.9 million and \$1.6 million respectively.

BURROUGHS reports, for the first quarter of 1979, sales of \$588 million compared with \$505 million for the same period in 1978. Analysis of these periods' sales shows an increase in rental and

service revenue of 15%, and 18% increase in sales of products and systems. Aggregate profits after tax were \$42.2 million for the first quarter in 1979 and \$33.5 million for the comparable period in 1978.

STORAGE TECHNOLOGY reports sales of \$99.9 million for the 13 weeks up to March 30, with pre-tax profits of \$13.24 million. For the same period in 1978 sales were \$37.3 million earning pre-tax profits of \$6.57 million.

DATUM INC reports sales for the 13 weeks ended March 31 of \$3.6 million. This was below the comparable figure for 1978 of \$4.1 million. Profit before tax dropped from \$341,000 to \$86,000 for these comparable periods. The reasons given for the fall in sales and profits were increases in development expenditure and new product development.

If there's going to be a mess on the line Analysis II will spot it

The picture above shows that lines of communication are not always trouble-free. Data travelling along telephone lines is just as likely to run into difficulty.

That's where Analysis II comes in. The network control system watches over the line, the modems and the terminals — to

spot faults quickly, and warn the operator.

Analysis II is simple to operate, and inexpensive to install.

Who knows? It could pay for itself in the first few minutes of use.

Find out more. Talk to CASE.

the intelligent solution

Microcomputers and Mainframes

Microcomputers are finding a place in data processing, both as stand-alone alternatives and as enhancements to existing data processing departments. Do you know their place in your organisation?

'Microcomputers in data processing' is a one-day seminar and exhibition being held on 12 June at The Grand Hotel, Birmingham.

Seminar Bookings, stating name of delegate and enclosing cheque for £78.84 inc VAT (NCC Members £70.95) to:

John Smith
The National Computing Centre
Oxford Road, Manchester M1 7ED
Telephone 061-228 8333

NCC seminar

THE CITY UNIVERSITY BUSINESS SCHOOL

COURSES IN SYSTEMS ANALYSIS 1979/80 DIPLOMA IN SYSTEMS ANALYSIS

This is a full-time one academic year course for data processing professionals who wish to broaden and improve their practical experience and theoretical knowledge of systems analysis. Candidates with suitable experience need not have a first degree. It may be possible for successful students with appropriate qualifications to convert the Diploma to an MSc by means of a part-time project and dissertation.

MSc in BUSINESS

SYSTEMS ANALYSIS AND DESIGN

This is a full-time one academic year course for graduates for whom suitable qualified candidates with data processing experience. The course provides a comprehensive academic and professional grounding in systems analysis and design that combines the practical demands of work in this field with the theoretical knowledge required. Candidates may be eligible for TOPS and BSC grants.

Further information on both courses is available on request from Admissions Secretary, City University Business School, 20 Goswell Road, London.

Beginners in micros

If you know little about microcomputers and are doing nothing on Saturday, May 12, the special magazine Personal Computer World may provide salvation. On that day it is holding a beginners' seminar at the West Centre Hotel, Little Road, London SW8.

For a fee of £12 per head, the magazine will be presenting author Rodney Zaks, who will cover such topics as hardware, software, business computing, and selecting a system. To complement the event, there will also be a "miniature" exhibition.

Texas adds to 700 series

ADOPTING its own TMS 9800 16-bit microprocessor, Texas Instruments has introduced a highly intelligent terminal into its 700 series. Called the T1771, it went on show in Europe for the first time at Hannover Fair.

It comes with 64K-bytes of main memory, and is offered with a dual floppy disc drive, each with a capacity of 256K-bytes.

Other optional attachments are a 30 cps thermal printer and a 150 cps matrix printer, and Texas believes the product will be attractive as the basis of a stand-alone word processor as well as a traditional terminal.

PEOPLE AND EVENTS

Professor on IBM board

PRINCIPAL of the London Business School, Professor James Ball, has been appointed a director of IBM UK Holdings and IBM UK. He has been at the school since 1965 when he became professor of economics. As well as his academic work, Prof Ball is currently director of Tube Investments, Barclays Bank Trust, and the Legal and General Assurance Society. He is a governor of the National Institute of Economic and Social Research, a fellow of the British Institute of Management and was chairman of the Committee on Policy Optimisation.

Ball

Neale

McKenzie

Cuzner

Tony Neale has joined the Data Communications Division of Harris Systems as a sales representative, responsible for the company's 8000/1600 range of computer terminals. He was formerly a salesman with Computer Ancillaries.

Ron McKenzie has joined Compaq as a systems programmer on Gaelic, their package for designing integrated circuits. He was previously with Cambridge Consultants, where he worked on projects using the Intel 8080 and PDP-11.

Fellowship for Cuzner

AN IBM fellowship has been awarded to David E. Cuzner, director of IBM UK's development laboratory at Hursley. The fellowship, first made in 1963, goes to IBM scientists, programmers and engineers who have an outstanding record of technical achievement.

Cuzner was the second UK employee to receive the award, for his contribution in the development of low-cost files. He is co-inventor of the swinging arm actuator which has increased the reliability of small disc files.

By Judith Morris

Expansion of MAI UK

Shops, Smedley-HP Order Processing System, has won the Imperial group competition for the system which uses a computer most beneficially. The competition was launched last year by Malcolm Anson, deputy chairman of the group, and he judged the entries together with David Finberg of the NCC and Jim McKinnon, finance director. The winning system ensures that all the day's orders from over 1000 salesmen and managers are received and processed on the same day. This is done by each salesman having a portable data entry terminal linked to an audio response microcomputer, which in turn is linked to an ICL mainframe.

Collin Powell (right), management services manager of Smedley-HP, is pictured being presented with a specially commissioned trophy at Imperial House, London, presenting the prize to Malcolm Anson, who congratulated the team on their "enthusiasm and initiative."

Anthony Costanzo has been appointed director of marketing for Rockwell International's Collins Communications switching systems division. He formerly worked for American Telephone and Telegraph company, where his most recent position was that of manager for product and business planning for industrial switched networks.

Richard Puk has joined Megatec as a sales director of software development. Prior to joining Megatec Puk was with Sandia Corp Albuquerque, where he developed and introduced an integrated package for the company's computer graphics facilities.

Deon Webster has joined MAI UK as a systems consultant. Before this, he was with Redi, where he was systems support manager in the company's finance branch. At Redi he will be involved in their banking communication and message switching system.

Effective and robust communications net

SHOWN installed in a Royal Signals communications vehicle, this microprocessor-based terminal equipment constitutes one node of a management information system designed to help improve the effectiveness of tactical trunk communications networks.

The system, Bruin MIB, was developed for the Ministry of Defence by Systems Designers and is specifically intended for use with the Bruin secure radio network operated by the British Army in Germany.

The system addresses the

Abacus 'stunt box' based on Intel micro

A UNIVERSAL bi-directional interface for connecting any protocol system to any other protocol system in computer-based hardware has been produced by Abacus Computers.

Colloquially known as a "stunt box", it can be used to connect "anything to anything", according to Abacus managing director, Derek Rowe.

Based on the Intel 8085 microprocessor, the system uses programmable read-only memories to store the relevant information. It is also equipped with sufficient random-access memory to act as a buffer memory, storing up to 240 bytes of data. Read-only and random memory are expandable

up to 12K bytes and 16K bytes respectively, so that in some control applications, the interface can also be used by itself as the control computer system.

A range of standard PROMs will be available for the common interface requirements, such as SDLC, HDLC, IEEE488 and RS232. With these, the system will cost around £250. For special requirements, Abacus will produce specific firmware, and the cost could be as much as £500.

One of its advantages, according to Rowe, is that such essentials as baud rates can be changed dynamically under software control, while the system is running.

Micro club moves

SELMIC, the South-East London Microcomputer Club, has moved its meetings to Thames Polytechnic in Woolwich. Its first meeting there was held last week, when several specialist groups were set up including groups for Nascom users, novices, business users and communications.

Club chairman John Williamson said the move had been made because of Thames Polytechnic's much more co-operative attitude to the provision of facilities, both the

number of rooms available for meetings and support for projects such as outside consultancy activities.

The club's next meeting will be combined with the Grace Hopper lecture on developments in micros, which will be given by Alex d'Agostoy of CAP-CPD today, May 10, at Thames Polytechnic main building, Wellington Street, Woolwich, from 4 pm.

Details of the club from John Williamson on 01-858 3281, ext 582.

ATLANTIC is on the move to its own new office building in the city.

Atlantic Computer Leasing Ltd., and their associate companies are pleased to announce the completion of their move to new premises at Red Lion Court.

MICRO NEWS

Rapid expansion is under way at the Rockwell International microelectronics division, and imminent announcements include one or more partnerships with European companies.

TIM PALMER reports.

HAVING mastered P-MOS and N-MOS technology, the microelectronics division of Rockwell International is now moving into Silicon-on-Sapphire, SOS, and expects to launch its first product, a low-power very high-speed 18-bit multiplier, later this year. This will be followed by a 16-bit microprocessor late next year (CW, May 3).

So says Malcolm Northrup, who heads the division, and has been touring Europe on a wide-ranging mission which includes assessing the market for board-level modern assemblies and weighing up the attractions of Europe against Mexico and the Far East for a new microelectronics plant.

The other major string to Rockwell's bow is bubble memories; the company has

Rockwell moves into SOS and bubble memories

been sampling its 256K-bit device for some time, and a dozen European companies are currently evaluating it.

"We will be sampling our one-Megabit bubble in the fall," says Northrup. "We believe the next step will be four-Megabit devices, but for these we will need to go to the new technologies announced by IBM and Bell Laboratories. We are working along the same lines as they are, but we do not deny that they have a lead."

Bell Laboratories has announced a way of eliminating the electric current coils normally required to generate the magnetic field around the active material, replacing them with a deposit of gold (Micro News, April 12), and IBM has announced a way of encoding the domain walls of the bubbles to

achieve a fourfold improvement in packing density (Micro News, April 26).

Northrup sees bubble memory as a natural replacement for fixed head disc storage, and mentions Electronic Cash Registers, ECRs, as the type of product where they might supplant the floppy disc.

"If you have 1200 ECRs in the field, the maintenance problems posed by a floppy drive on each terminal are enormous, and would justify the extra cost of bubble memories," he comments.

Interestingly, he sees the EEC market as a prime one for bubble memories, noting that while present EEC business accounts for 15% of the division's total, EEC sales of Rockwell's bubble memories could account for 30% of the total on this product.

The biggest single success so far from the Rockwell stable is the four-bit PPS-4/1 micro, which is an enormous seller in the games market.

"The electronic games market is growing at between 30% and 40% a year, and is limited by both the number of chips we can ship and the availability of displays."

Rockwell's eight-bit chip is the PPS-8, and neither has been particularly dominant in the data processing market, although Hindustan Computers in New Delhi has adopted the PPS-8 for a business system and the PPS-4 for a programmable calculator (CW, June 8, 1978).

Rockwell is also a second source for the MOS Technology 6502, and the company's entry into the 16-bit market, due

shortly, is expected to offer substantial software compatibility with this device (CW, November 30, 1978).

Rockwell Microelectronics at present does 8% of its business with other Rockwell companies, mainly in the defence field, and Northrup anticipates that chips as big as one centimetre square will be needed to handle the ultra-fast signal processing requirements of forthcoming defence applications. It is in part for this market that Rockwell is mastering SOS technology. Northrup sees business with other Rockwell companies growing to 20% within five years.

Visiting firemen invariably face a barrage of questions about the practicability of the National Enterprise Board's microelectronics venture, and Northrup has no exception. "You're talking about that American company in Colorado Springs? I understood that the intention was to aid the UK, and I do not see how aiding the first production facility in the US

By Martin Banks

NORTHROP... "We will be sampling our one-Megabit bubble in the fall."

achieves that and. But India has some excellent people: well qualified industry leaders.

"The investment in India is a significant amount of money, but I doubt whether it is enough to start a major microelectronics company," he warns.

On the link between GEC and Fairchild, he believes that it has more chance of success, provided that the two companies are attuned to each other and can work together.

On the possibility of selling Rockwell's foreign plant in the UK, he acknowledges that the country's industrial relations record is the biggest concern, but does not rule the UK out of consideration on those grounds.

Easing the system design process

BUBBLE memory application with the systems designer very much in mind would seem to be the philosophy behind Intel's Magnetic Random Access Memory (MRAM) entry into the market-place. As predicted, (CW, April 26) the company last week introduced a 1M-bit bubble memory component, together with a set of support circuits specifically aimed at easing the system design process.

The memory is expected by the company to be used initially in micro-based systems applications requiring between 128K bytes and 2Mbytes of storage. In particular, Intel expects to see it being used in terminals, word processing systems, telecommunications and process control.

The prime component in the Intel set is the 7110 bubble memory. This is a serial-parallel-shift register device with a binary page organisation. Measuring two square centimetres in area, the device holds 2,048 pages. Each page is 512 bits, which is itself divided into 256 bits, or 64 bytes.

In addition to this main storage area, the device also in-

corporates error correction codes of up to 32 bits per page. There is also up to 192K bits of built-in redundancy in the memory, so that minor defects during fabrication do not necessarily mean rejection of the device of the manufacturing stage.

Its performance specifications include a random access time per page of 40 milliseconds, while the page read and write times require 0.5 milliseconds each.

To some extent, the important products in the Intel chip set are the interfacing components. These are the 7220 bubble memory controller, the 7240 format/sense amplifier, the 7230 current pulse generator, and the 7250 coil predriver.

The format/sense amplifier is probably the key component in the set after the memory itself. This connects the memory device to the memory controller via a serial bus, so that memory configurations of up to eight bubble memories (1Mbytes of store), each with its attendant format/sense amplifier, can be run from one controller.

Abacus takeover bid by anonymous US firm

THE move by a US company to take over Abacus Computers (Micro News, April 5) has been confirmed by managing director Derek Rowe. An offer "well in excess of £100,000" has been made for a 25% stake in the company's equity, plus a capital injection.

This is now being negotiated with the US company, which Rowe declined to name. It is possible that the equity stake could be increased, and that the acquirer may also become involved in Rowe's other company, Small Systems Engineering.

The main outcome of the move, according to Rowe, will be a concerted move by the company into the European market. It will also involve the addition of a new, Data

General-based computer system to the company's existing distributionships for Texas Instruments and Commodore.

This new machine will be a customised version of the Data General Nova, which will be equipped with 32K by 16-bit words of main memory, 10 Mbytes of hard disc storage, configured as 5 Mbytes fixed and 5 Mbytes removable.

Known as Dimension Data, the system will be coming direct to Abacus from Data General in the US, and will be marketed by Data General in the UK.

Abacus has also dropped the distributorship of Ohio Scientific, which Rowe says does not now fit the company's market.

CHESSLAB

By DONALD MICHIE

Heuristics v analysis

game. Such a system must proceed by exhaustive analysis. How much blind search must it do?

Black can spin things out for 14 moves (28-ply). At each step White's choices average about 20 legal moves and Black's range from one to five — many more in "stupid" branches of the lookahead in which one or more pawns have been captured. In brute-force lookahead such variations must be included. So the total number of variations to be searched is something like 20×5^4 or 10^5 . Conclusions in the absence of heuristics, the position defies analysis.

I recently had the instructive experience of watching the response to this problem of the British program Master, developed at Harwell by Peter Kent and John Birmingham.

When set to search only 5-ply deep, the program soon made a false set and was lost. But when re-set to 7-ply it unrolled the solution unerringly. The concepts embedded in its "evaluation function" which it found relevant were the following:

1. Checkmate.

2. Repetition of position.

3. Move kings together in the end game.

4. Positional value of kings is high in the middle of the board, low at the sides and lower still in the corners.

5. Attack and control of squares next to the opponent's king.

6. Checking the king.

7. Opposition of kings.

8. Passed pawns increase in value as they advance. A passed pawn on the seventh rank is worth at least a knight if the square in front of it is not attacked or blocked.

9. Threatening, controlling and blocking squares in front of passed pawns.

10. Threatening and controlling squares containing passed pawns.

11. Pawns on the eighth rank are converted to queens and take the material value of a queen.

12. Threats to queens, rooks and pawns and swap-offs on the

squares containing these pieces.

13. Distance of kings from the pawns.

14. X-rays and skewers.

15. Kings outside the square of passed pawns.

The following account is based on Peter Kent's comments:

While the above elements all had some part in the ordering of moves, most of the moves were decided by a very small subset together with an algorithm which tells the machine to keep searching until a "reasonable" move is found (if one exists). "Reasonable" is defined by numerical limits which it decides for itself and is based on the value at the base of the tree and the backed-up score.

In this example every move was dominated by the need to prevent the pawns queening. When there were several alternatives for the given depth of lookahead it selected moves that forced repetition or kept the opponent's king away from the

centre of the board and the two kings close together.

Elements 1, 2, 3, 6 plus material value including 4 and 11 are probably sufficient to solve the problem.

A tree searcher is much more robust than a knowledge-based program but is less precise. It will often find the correct move even if the knowledge it does have tells it to search in the wrong area initially. White's

19th move in Master's solution to the above problem is a good example.

White's correct move is R-R8, but this is against most of Master's evaluation terms. It leaves the squares in front of the passed pawns uncontrolled. It does not threaten the passed pawns. It removes control from a square next to the opponent's king.

Even worse — in the lookahead it finds that it forces the opponent's king to run away from the corner and towards its pawns. Of the 22 possible moves only two have a lower score, and yet Master found the correct move because it was the only possible move. The cost of this bad advice, however, was an increase in the number of positions examined from an average of about 15,000 to 125,000.

The 28-ply calculation used earlier was based on a much shorter solution than the one found by Master (and given by the study's composer Moravec). Can the reader find it?

WHITE (to move)

IN the following chess miniature, (Moravec, 1927):

WHITE (to move)

(Ringed symbols denote White pieces)

Black has awe-inspiring pawn-promotion threats. Yet White can draw. How?

First consider the problem as it presents to a machine system devoid of understanding, i.e. un-equipped with any concepts beyond the bare rules of the

CONFERENCES

A ONE DAY seminar on the distribution and handling of documents in large organisations will be held at the new Kensington Town Hall, on June 8. The event is organised by Fraser-Nash (Mechanical) Ltd. The seminar will include a short film to introduce Transac, a microprocessor controlled robot delivery system which will be available in Britain later this year. Details from A. Wilson, Fraser-Nash (Mechanical), Burgess House, Lower Teddington Road, Hampton Wick, Kingston upon Thames, Surrey. Tel: 01-777 1451.

THE evolution and future impact of telecommunications will be discussed at Teletronics '78, to be held in Paris at Unesco, from June 11-13, together with an associated exhibition. Organised by AFTEC, the conference was proposed by the Technical Committee 6 and is sponsored by Unesco, the CSE and ICC. Further information and programme from AFTEC, 156 81d Perle F 75017 Paris.

MATERIALS requirement planning is the theme of a one day seminar, to be presented by Neil Mather and organised by the Yorkshire and Humberside branch of the British Production and Inventory Control Society. The seminar, which is open to non-members, will be held in Leeds on June 11. Details from the administration of the APICS on 0178 812788.

SEE, the West of England Electronics Show, which will present electronic equipment components and services, will take place at the Bristol Exhibition Centre, from September 11-13. Organised by Exhibitions for Industry, the exhibition will be supported by extensive promotional campaign. For details tel: 0853 4731.

SELLEVUE, Manchester, will be the venue for the Office 78 conference and exhibition, from June 11-14. The conference will provide a programme of papers from some leading experts in industry, with emphasis on office management and buying techniques. It is organised by Magnum Exhibitions, 157 Station Road East, Oxford, Surrey. Tel: 0853 4731.

EDWARD OF BONO will be giving a three-day tutorial, organised by Infotech, from May 23-25. It is called Lateral Thinking, a special tutorial for OP personnel, and will be held at the Lords Conference and Banqueting Centre, London. For details contact Colin Sreed on 0628 35031.

AN international conference organized jointly by the BCS and ACM, on the theme of research development in information retrieval, will be held from June 23-27 at St John's College, Cambridge. Papers are requested for presentation at the symposium, and contributors must submit a 2-page synopsis of their paper by September 14, 1979.

ENGINEERS from all disciplines, who wish to understand microprocessors in engineering, can now attend a short course specially designed for them. No previous knowledge of digital techniques is required. The course is organized by the Inter-University Institute of Engineering Control, and will be held at Warwick University, on July 11-12. For further information contact Dr P. K. Shaw, the Course Organiser, Microprocessors in Engineering, Dept of Engineering, Warwick University, Coventry. Tel: 0203-24011.

CIRCUIT analysis by computer is the title of an intensive course given by the Department of Electrical Engineering at Imperial College, London. It is designed for electronic engineers who have not had the opportunity to become familiar with the use of computers. The course will be held from May 22-26. For details tel: Joan Jeffery on 01-859 9111, ext 1470.

Disk packs from Control Dataset.

Because you can't choose better than the world's biggest brand.

The Control Data label on a disk pack reflects its maker's system/drive/head/media total technology capability. Control Data is the world's largest supplier of scientific and engineering computer systems. The leading supplier of OEM peripherals, particularly of disk drives. The biggest manufacturer of disk packs and cartridges. With large-scale U.K. manufacturing facilities, for full quality control and maximum availability. For exclusive supplies of CDC and ICL label magnetic media contact Control Dataset. You'll gain the services of Britain's most extensive and experienced sales and technical support force. You can't choose more wisely than the biggest names in disk packs and cartridges, from the U.K. industry's largest supplier. Call Control Dataset on 0438 3822, today.

More than a Computer Company

Brand leaders in interactive systems

The DS990 series of mini-computers has an interactive capability that greatly speeds up data throughput and quickly gets down to making your business more efficient and more profitable. Based on the 990/10 processor, the DS990 family is expandable to cope easily with company growth, handles high-level languages (including COBOL and RPG II) and has powerful system utilities, such as Sort/Merge

and Data Base Management. Like the brand leaders in our picture, a DS990 mini couldn't be easier to use. And, with system prices starting at well under £20,000, its price/performance value is unbeatable.

"The first minicomputer system I've seen that's truly designed for the interactive user" — that's how a customer summed up our DS990 series. We think that's how you'll see it.

Please tell me more.

IBM trails House of Fraser ICL by year switches to Swindon

From front page
enables documents on the host to be viewed instantly rather than after they have been transferred to the 3730 disc; an input format for the Stairs information retrieval system, C&I 17, and use of the host printer for document output, C&I 17.

There will also need a DOSS package on each communicating 3730, costing £41.10, and the direct viewing facility also requires software on the 3730 costing £13.70.

ICL West Gorton to be rebuilt

ICL has announced that it is going ahead with the rebuilding of its research and development centre at West Gorton, Manchester.

The old factory buildings at West Gorton will be demolished and replaced by a complex of offices, workshops and laboratories incorporating the existing tower block which was built only ten years ago. It currently houses most of the 1,400 development staff based at West Gorton.

From now on, West Gorton

RETAIL group House of Fraser has wound down Knightsbridge Computer Services, its division based at Acton in West London that handled most of its data processing workload, and has moved the whole operation to Swindon where it has just opened a purpose-built computer centre.

Called the Fraser Centre, the new Swindon installation houses two ICL 2980 systems, and these have taken over all the work formerly handled by two ICL machines, a 4/50 and a 4/72, at Acton.

will be devoted to R and D. Large systems assembly is being transferred from there to a new site at Ashton-under-Lyne and PC board manufacturing to a new plant at Upper Brook Street, Manchester, not far from the West Gorton site.

Building at the two new locations started last year (CW, May 4, 1978) and is scheduled for completion shortly, according to ICL. Ashton-under-Lyne will employ more than 1,000 staff and Upper Brook Street will have nearly 500.

The two 2980s come with one and two Megabytes of main memory and both emulate the System 4 environment under DME/4 at the moment, although the plan is to run the two-Megabyte machine under VME/Bus soon as enough of the System 4 workload has been converted.

Before the Fraser Centre was completed, the one-Megabyte 2980 was already running at the nearby W. H. Smith computer centre, where it was installed in April 1978 on a temporary basis for training House of Fraser staff and for developing and sizing DME/4 work (CW, April 6, 1978).

Under its agreement with House of Fraser, W. H. Smith was able to offer System 4 and 1900 DME services on the 2980 on a bureau basis.

Chinese journal
A CONTROLLED circulation computer monthly for distribution in the Peoples Republic of China has been launched. It is being written and printed in Hong Kong, comes from Computer Publications Ltd and is called China Computer Monthly.

COGARVIEW

Billions wasted by lack of planning

THERE are well over 11,000 government-owned computers in the US; probably no one individual, office or even databank knows quite how many. Each one contributes in some measure to the executive's attempts at economic and social planning.

Yet the computers themselves operate in a totally haphazard environment in which lack of planning has wasted billions of dollars of the very economy which the computers are supposed to be... and so on.

This assertion comes not from me, but from an even more

impeccable source: the government itself. Its Comptroller General came out this summer with a report which fairly sizzled over the inadequacy of the government's computing methodology.

Because government agencies had failed to come up with any standards to compare with, say, the standards adopted by the banks in the 1950s to improve cheque processing, incompatible systems abounded, leading inevitably to duplication of work and resources. And because agencies wanted to avoid the labour of software conversion, they were virtually locked into single suppliers, losing all the potential advantages of competitive tendering when it came to equipment replacement.

The Comptroller General's report provides plenty of ammunition for the economic hawks in the US, implacably opposed to all forms of central planning and government regulation of business. "If the government cannot even control its own computer systems," they will be saying no doubt, "how can it possibly control the far more complex macro-systems of the economy or the environment?"

But the argument against planning in general seems to be derived from an unfair reliance on particular examples of planning failure. I cannot accept that attempts to set national priorities and programmes aimed at their achievement are necessarily unproductive. The problem is that the resources applied to these attempts are rarely sufficient to guarantee success.

In the West the deficiency, as exemplified by the Comptroller General's report, tends to be methodological. Some would say that is because people brought up in a free market environment (well, more or less free) are basically ill-adjusted to the concept of national planning and therefore do it badly. To be sure, we have the hardware, but so far we don't seem to have developed the hardware in an efficient manner.

But there are exceptions. The US national census is an enormously successful instance of applied methodology. It is incredibly detailed. I can go into the census bureau, buy the demographic profile of New York City, and instantly I know how many Latvians there are in the city, first or second generation, whether they live in homes with bathrooms, and so forth.

If Big Brother is not yet exactly watching Americans, he is certainly counting them with considerable effectiveness.

The US national census is, of course, heavily computerised. It could not conceivably be undertaken otherwise. Its analyses form an unparalleled database for long-term socio-economic planning. If we but knew what to do with this great mass of raw information.

The US census, in fact, is not at all dissimilar from those undertaken by East European countries, where a comparable level of hardware and software investment has been poured into amazing demographic statistics - whence all good planning flows.

A small country like Hungary, for instance, just now planning

its second computerised census, stores the data on 15 200-Mbyte disc units, uses Honeywell's Integrated Data Store (IDS) software for processing, and will employ something like 80,000 inspectors checking the quality of the data collected.

Talking of methodology, it is interesting to note that the demands of the Hungarian national census have led to a new Rjed standard for expressing the language's nine accented vowels. Up till now, only four of the accented vowels have been included in the usual sign stock of Hungarian computers; this was adequate for normal transactions, any ambiguities being resolved by context. But it would not do for the census, since many Hungarian surnames are only distinguishable by accurate rendering of their accented vowels.

The Soviet Union is probably the most conspicuous example of the planned economy, and economists delight in pointing out its shortcomings, often comparing its attempted hierarchical layering to that of a haystack. But the dedicated scientists at Gosplan have to contend with inadequate hardware and whimsical political decisions. How could anyone plan the economy of a country as complex as the USSR on a couple of obsolete ICL System 4/70s and a pair of Elliotts which ought to be in a museum?

As for political whimsy, what better illustration than the level of car ownership in Georgia, favoured in regard to consumer durables since Stalin's day. The Georgian motorists have precious few roads to drive on, since prestige demands that new roads be built in and around Moscow. Even the planned economy has its irreconcilable political priorities.

In fact, of course, all Western economies are far more centrally planned than many people realise. The US government has an enormous influence on R&D, for instance, through its funding mechanisms. Businessmen complain constantly of the contradictory demands of the country's federal agencies. Energy, though nominally in the hands of private companies, is so regulated as to be effectively a national service. The same goes for communications - to date.

This is inevitable. The world is too complex to be left to the interplay of market forces alone. Businessmen, themselves, in many instances, are coming to realise this. Oil company presidents and no less a capitalist than Henry Ford II have recently called for more, not less, government intervention in the energy market. Businessmen operate best in conditions of stability, and stability is what national planning can provide properly undertaken.

But it is the effectiveness that counts. Bad planning is worse than none at all - it creates the illusion of stability without the reality. What is wanted is a concerted programme to work out a methodology for national planning. The work of federal agencies needs to be codified, collated, inconsistencies ironed out, realistic targets set and realistic mandates removed. It will take political nerve and a hell of a lot of money.

IBM 4300 OPPORTUNITIES IN THE THAMES VALLEY

An outstanding opportunity has arisen for two people to join the recently formed computer development team at the European Head Office of an American market leader in the consumer products field. Major development concerns the design of a very sophisticated On-Line Order Processing and Inventory Control System for which an IBM 4331 has been ordered. This is an ideal career move for people wishing to join a project in its initial stage.

PROGRAMMING PROJECT LEADER

READING

The successful candidate will take a predominant role in the control of project programming and will be given the responsibility of leading the programming team. Following a training period in the U.K. company the person can look forward to visiting the USA headquarters to gain an insight to the business and technical background of the international operation.

Candidates should be able to offer at least four years' substantial COBOL programming background, preferably IBM 370 DOS, together with the ability to lead technical development.

Career prospects are excellent within this progressive and expanding organisation. The competitive starting salary is further supported by a comprehensive range of company benefits.

ANALYST/PROGRAMMER

HENLEY-ON-THAMES

£6,500-£7,000

The analyst programmer appointed can look forward to full analytical involvement and will become an integral link between the user and the computer development team. The person will be able to develop their technical skills and gain experience of the facilities offered by the IBM 4331. Candidates should possess good COBOL experience coupled with design and specification involvement and the ability to take system development through all phases to successful implementation. IBM 370 experience though not a necessity would be an advantage.

Tally T1612 printer terminal - just unbeatable

The Tally T-1612 - proven over 18 months of field experience as the most versatile 1200 Baud printer terminal available. Even the latest 1200 Baud printer terminals cannot compete with all of the T-1612's superior features. Only the T-1612 offers comprehensive forms handling variants, such as quick tear-off, top feed or bottom feed, as well as 42 operator programmable keyboard functions.

Other clear advantages that the T-1612 has over other printer terminals are -

- ★ All electronics housed in the printer terminal itself allows choice of desk-top or floor mounting
- ★ Recalva only (RO) printer option available (Keyboard of the KSR is removable)

- ★ Quietest Impact printer terminal available - ideal for office use
- ★ Compact, modern styling
- ★ Immediate availability
- ★ Competitively priced and dependable production through parallel manufacture in Europe and USA

On top of all these advantages, the Tally T-1612 has positive above and below the line tractor feed, many switch-selectable functions, 160 cps optimised bi-directional printing, six different type fonts, fast, superb print quality, and many optional extras. All this proven performance at a very competitive price.

Logica

Top Consultants for Holland

£18K to £22K

Logica is a world leader in computer consultancy and data communications systems.

Specialising in:

- policy consultancy
- turnkey systems
- advanced computer technology
- on-line, real time systems
- message switching, data transport networks

Experienced computer professionals are invited to apply for the position of:

Senior and Principal Consultants

in Logica (Banelux) BV, Logica's operating company in Rotterdam.

We look for:

- a degree or equivalent
- 10 years experience in systems implementation and consultancy
- a solid grounding in design and implementation of real time and on-line systems.

We offer:

- a highly challenging professional environment
- fringe benefits appropriate to these high level appointments
- excellent working conditions in a most attractive, progressive and harmonious society

Either write giving your qualifications and experience to:

Mrs L den Haring
Logica (Banelux) BV
Vasteland 12,
3011 BL Rotterdam,
The Netherlands.
Tel. nr.: 10-33 08 44

Or if you require further information telephone Logica in London (01-637 9111) and ask for Hector Hart.

THE BEST OF BOTH WORLDS

Just a few miles from the bright lights of Piccadilly, in one of London's most pleasant suburbs, the bright light of opportunity is calling to SOFTWARE ENGINEERS AND MANAGERS. Our client urgently needs real time software designers and managers to staff up their expanding stored-program controlled telecommunications operations. This involves the full range of complete hardware from micros to large purpose built processors. They are also looking for experienced HARDWARE LOGIC DESIGNERS keen to get into this major field.

The work is varied, and challenging: the teams are youthful, enthusiastic and energetic: the rewards are good and the prospects are excellent — and our client is very helpful to those wishing to relocate.

We shall be at the De Vere Hotel, 60 Hyde Park Gate, Kensington, from Monday 14th May through Friday 18th May, 9.00 a.m. until 9.00 p.m. (or the bar closes!) Call in and talk over careers with us.

Or ring Bill Byrne now on 01-629 7262 (reverse charges).

JBA

Product Marketing Consultants

London Based to £9,000
Following our success over the past few years in marketing products such as the IDMS database management system, Seicon has formed a Products Division which is wholly dedicated to the development and marketing of software and/or hardware products. Our minimum requirement is for two consultants to take responsibility for identifying and specifying products in particular areas.

Applications Software Product Consultant

The candidate should have a minimum of six years' experience of applications work, including system analysis and project leading in a commercial environment. Experience of manufacturing or financial applications would be of particular interest. He/she should be fully conversant with IBM 360/370 hardware and software. Experience of DL/I would be an advantage.

Micro Product Consultant

The candidate should have a sound background in commercial data processing, together with up-to-date knowledge of the latest micro computer technology. He/she should be able to not only demonstrate this knowledge but also an awareness of how it can be applied in a small business environment. Experience of running or helping to run a small business would be a considerable advantage.

HOLLAND

PDP (MUMPS) Programmer

salary: v. high

A leading Medical Systems manufacturer seeks a Programmer with software experience on PDP equipment, together with the ability to engage in customer support activities. The peripheral equipment is mainly of a modular, electronic structure with a central DEC processor and A-D converters acting as interface devices.

Applicants must have a sound knowledge of MUMPS and a background on any PDP computer system. The customer support aspect will involve user contact and therefore a personable character is essential.

Contact: Mike Creamer

For further information on any of the above vacancies please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

Technical Writer

Help us to Help Management
run their Business

(Gloucestershire)

Racal-Redac Limited are specialists in the development of Computer Aided Design and Business Control Systems based on the D.E.C.P.D.111 Computer.

Our growing customer base both in the U.K. and overseas has resulted in the expansion of our technical writing team who are engaged in the composition and production of user manuals. In particular an opportunity exists for an experienced Technical Writer who will be responsible for the user documentation, which is in the process of being computerised, for our commercial system; the Redac Executive.

The Redac Executive is a mini computer - based management aid which is utilised in areas such as budgeting, forecasting, sales, purchasing and stock control. It is simple to operate and has become recognised as the ultimate in man-machine interaction.

The Technical Writer (male/female) will need to operate and to understand the system and will constantly liaise with our programmers to produce accurate but easy to use manuals.

Racal employment benefits are attractive and include 24 days annual holiday and a Company pension and free Life Assurance scheme. Racal-Redac is situated in the heart of the pleasant Gloucestershire countryside and relocation assistance will be provided in appropriate cases.

If you feel you could make a success of this challenging opportunity in a new growth area, please write with details of age, experience and present salary to: B. Ashcroft, Personnel Officer, Racal-Redac Limited, Newtown, Tewkesbury, Glos. GL20 8HE. Telephone: Tewkesbury 294161.

Britain's fastest growing electronics group

RACAL

Senior Operators

c. £5600

Twin ICL 2960 mainframes

Wiltshire

Our client, a major British group with a unique record of home and in exports has centralised its DP service division in Swindon, Wiltshire, in brand new purpose-built premises based on twin central ICL 2960 mainframes supporting a network of remote mini and micro computers.

To meet the expanding requirements of its Operations Unit the company wishes to recruit several senior operators, with around five years operations experience, and with knowledge of 2900 VME/B or System 4, J1800.

These are ground floor opportunities for people with the right experience and aptitude, to develop worthwhile and rewarding careers in DP or into the company business. The company is geared to a comprehensive staff development and training programme and people with obvious talent are given every opportunity to progress. If your application is successful you could be comfortably in management positions when the time arrives to establish fifth generation DP policy. The client is able to offer good starting salaries and unique benefits to successful candidates and an excellent relocation package.

These appointments offer a wide area of responsibility and control, covering computer room operations; data control, input/output handling.

The computer hall is 6600 square feet in area and contains the latest in 2900 technology via twin 2960 mainframes with 3 megabyte core storage under DME4 and VMEB as appropriate. There are on-line programming facilities, and in 1980 a network of data capture devices will be linked on-line to the mainframes. In addition the site has been designed and planned to cater for any foreseeable expansion in terms of hardware and staff. Linked with the mainframes are devices including Ventek and Redifon equipment.

There is a well appointed operations staff rest room, a games room, a dining hall in the building complex, and a tennis court and putting green. These opportunities are likely to be of interest to people who are experienced operators looking for, and having the potential for, a wider involvement than pure computer room operations control.

TO APPLY

Applicants, male or female, are invited to send a simple ONE PAGE NOTE (handwritten) covering the following brief details: name, address, age, day time and home telephone numbers, operations experience to date, previous employers and positions held, relevant hardware experience, present employer and position, and salary to ANTHONY SPURR, Recruitment Division, quoting the reference number G721 at the address below. All applications will be dealt with promptly and in strict confidence. Applicants will not be asked to complete application forms prior to an offer. Please note on the reverse side those companies to which you would not wish your application to be sent.

COMPUTER OPERATOR

We are part of a large International Organisation and we wish to recruit a D.A.T.A. 100 Operator for our installation in South Warwickshire.

The successful applicant will be responsible for the processing of a wide range of manufacturing and financial applications in a day-shift only environment. A minimum of 12 months' operating experience is desired and preferably with some I.B.M. OS/360 knowledge.

The existing configuration, shortly to be upgraded to key-to-disc, is linked via a communications network to a large data centre in the U.S.A. running dual 3033s operating under MVS/JES3. This is a genuine opportunity for the right person to join a small team working in an active and challenging environment with a recognised career path leading to either complete operations supervision or programming.

An attractive salary will be paid to the successful applicant. Please contact:

Computer Manager

The Public Health Laboratory Service Board invites applications from suitably qualified candidates with enthusiasm and drive for the position of Manager to take charge of a newly formed Data Processing Unit.

The Board provides a microbiology service at 52 laboratories throughout England and Wales, at the Central Laboratory, Colindale, NW9, and from April 1, 1979, at the new Centre for Applied Microbiology & Research, Porton Down, Wiltshire. A number of computer projects already under way are to be brought under centralised control together with future developments. A CTL computer is now being installed at Porton Down.

The Manager will be responsible for planning the development of a coherent, organised service. He/she will be based at Colindale though at first, during the commissioning and programming of this new computer much time will be devoted to the unit at Porton Down.

The successful candidate is likely to be a graduate with sound experience of modern computing methods. He/she, while responsible to the Board's Headquarters, will work with senior scientific and medical staff at the different units.

The appointment will be under NHS terms and conditions of service with a salary on scale 23, £9965-£2423 plus £354 London weighting.

A copy of the job description may be obtained from Dr. R. A. Bassett, P.H.L.S. Board, 61 Colindale Avenue, London NW9 5EQ (Tel. 01-200 1295) to whom applications with full career details and names and addresses of three referees, should be sent by May 31, 1979.

UP WHITFIELD RD, LONDON

Principal Computer Operator

Philips Research Laboratories require an experienced Operator to join a small team in the Computer Department.

The Department runs a computing service for scientists and engineers involved in many varied areas of research. It is based on two ICL 1904S processors, using a special version of George III which allows built to access the same file store. A DIGICO 1800 front end connects 18 terminals. Later in 1979 an SEL 32 computer system will be installed to do CAD of integrated circuits.

The person chosen will be involved in all usual aspects of operating, and will also be required to assist and deputise for the Chief

Computer Operator in organisational and technical matters. Consequently, several years' ICL and George III experience are essential together with a technical knowledge of communications equipment. His ability and flexibility to learn about new systems is also needed.

A five day week is worked, normally 8.30 a.m. to 4.30 p.m. with shift hours 6 times in two weeks from 7.00 p.m. to 10.00 p.m.

Please apply to: Mr M. L. Melpess, Philips Research Laboratories, Cross Oak Lane, Salfords, Redhill, Surrey. Telephone: Horley 6544.

COMPUTER GRAPHICS OPPORTUNITIES

TEKTRONIX INTERNATIONAL, based in Amsterdam, is the European Marketing Center for our very successful Computer Graphics product line. We are interviewing for a:

MARKETING CO-ORDINATOR

He will report to a European Product Manager and be responsible for initiating, implementing and monitoring programs for major products and accounts in Western Europe. His activities will also include assisting in planning, training and maintaining a close relationship with the field sales force. Candidates should have experience in the computer or terminal industry, good organisational skills and an ability to communicate well. Sales experience is helpful but most important is an interest in marketing and an aggressive, businesslike attitude.

We are also interviewing for a:

PRODUCT SUPPORT ENGINEER

(HNC or equivalent)

to provide technical support for our computer graphics products. Knowledge of minicomputer hardware, software and interfacing will be an advantage. Several years of work experience are desirable but new graduates willing to learn fast will also be considered.

We offer attractive salaries, a share in profits, vacation allowance, usual large-company benefits and excellent career opportunities.

Applications should be written (ref. IDO) providing full curriculum vitae to:

REVEREND TRENT WATER AUTHORITY LOWER MERWYTH DIVISION
SENIOR COMPUTER/TERMINAL OPERATOR

(PA 10)
£4325-£4550 per annum, plus £312 per annum supplement

Applications are invited for the above post within the Division's Finance Section, which is at present based in Gwent.

The person appointed will be the senior of two operators paid working a double shift system on two computers.

The installation consists of:
(a) An ICL 2903, which forms part of a Gwent-Trent distributed processing network and used mainly as a terminal for time-sharing systems.
(b) A Honeywell 200 used locally for measured billing and scientific data.

Superiority of an ICL 2903 would be an advantage.

Application forms and further details from the Divisional Personnel Officer, Revenue-Trent, Water Authority, Lower Merwyth Division, Southwark Park, Basingstoke Road, Basingstoke, Hampshire, RG21 2EA. Telephone: Basingstoke 62971.

Closing date: 12th May, 1979.

Senior Operators

Berkshire

to £4600 inc

You don't often get the chance to join a new large DP installation where you will get extensive training and real career prospects.

The company we are helping is building one of Europe's more advanced complexes using mainframes and minis to provide a comprehensive distributed processing network. They now need two senior operators, working a 3-shift system, to help their shift leaders. The shift teams are small and the environment friendly.

We are looking for bright individuals with around two years experience on a modern mainframe or large mini, ideally with TP. The hardware itself doesn't matter as full training will be given.

The company is located in Berkshire, within easy reach of North Surrey. Benefits include easy parking, subsidised restaurant and an excellent sports & social club.

Recruitment

in Informatics

Interdata Programmers West Germany

Salaries: to £15K

An international client with a long track record of successfully implementing new systems for European Public Institutions and Government Agencies is seeking several INTERDATA oriented Programmers for a long standing German project. They now require additional personnel to cope with the installation of new hardware and extended applications areas. You will become a member of one of several specialist project teams in which you will make a valuable contribution whilst simultaneously expanding your own technological frontiers. We are

specifically requested to recruit only FORTRAN and Assembler Programmers who are fully familiar with Interdata B/32 hardware. You should therefore offer two years or more programming experience on this machine. The applications areas in which you will be involved comprise mathematical modelling, testing, data communications and verification. On completion of the project you will be given every opportunity to relocate to one of the company's other European offices. L/10/05/A

Sr. Project Analyst-Managers Thames Valley

Salaries: c £9.5K

A leading commercial organisation with recently acquired IBM hardware requires Senior Project Analysts and Project Managers for its advanced distributed processing plans. Currently, the main computing activities take place in U.K. with supporting Data centres in U.S. and E.E.C. The Company is seeking several additional personnel to conduct an appraisal of its proposed software and project plans within the particular areas of accounting and audit

operations. Ultimately, it will be essential to control and monitor both the progress of the total project and also the allocation of staff. Ideally successful candidates should hold a numerate degree and have had five years experience both within programming and systems analysis/design. Experience with recent IBM hardware in an on-line environment is a decided advantage, as is the desire to travel during the course of employment. L/10/05/B

Camac Programmers Copenhagen or Holland

Salaries: to £15K

Scandinavia's leading Systems House and Software Consultancy seeks several Programmers with current expertise of software development and design on micro processors, preferably Intel 8085/6, Zilog Z80 and Motorola 6800. You will be required to

relocate immediately to one of our client's European offices. It is anticipated that employment will commence in either May or June. For further information telephone one of our Recruitment Advisers immediately. L/10/05/C

U.K. Re-Insurance Group City of London

Salaries: £6.5K-£9.5K +

A leading City of London based Re-Insurance and Merchant Banking Group with a recently acquired U.S. subsidiary with extensive and soon to be upgraded computing hardware requires additional D.P. personnel up to Project Manager level. Ideally you must offer a programming background in PL-1 under OS or MVS and will either have on-line expertise or a desire to move into this area or Data Base design through participation in our client's training programmes. Of particular importance is the

ability to work as a member of a Specialist Project team under strict documentation and programming standards. A second language — ASSEMBLER/COBOL — would in addition be of considerable advantage. Our client in addition to an excellent salary offer a reduced rate mortgage, private health and non-contributory pension schemes plus restaurant facilities. Interviews will be held on the company's premises towards the end of the current month. L/10/05/D

Analysts + Programmers New South Wales

Salary: \$A 14,000-\$A 22,000

One of Australia's leading Finance Companies in the fields of Merchant Banking, Foreign Exchange and Portfolio Management is seeking a variety of d.p. staff who wish either to emigrate permanently to that country or to take a minimum of 2 years contract. Applications Programmers should offer at least two years practical experience in COBOL and preferably on large up to date Burroughs hardware. Inevitably a

banking or insurance background will be an added bonus. Systems Analysts must show a prior programming background and demonstrate that they have completed at least one system from feasibility to implementation. For further information regarding interviews in London, you should contact us either by submitting a detailed C.V. or calling before 15th May. L/10/05/E

Real Time Mini turns night bird!

More and more clients offering salaries up to well over £10,000 have forced us at Real Time Mini's place to man — or, rather, woman — the telephone 24 hours a day.

Reason is that we want to be available to qualified callers who can't sleep for wishing they earned more money.

Like PROGRAMMERS, PROGRAMMER-ANALYSTS, SYSTEMS DESIGNERS and PROGRAMMERS, SOFTWARE ENGINEERS, PROJECT MANAGERS and HARDWARE ENGINEERS with at least a year's Real Time Mini or Micro experience — any configuration — and Assembler and/or high level language.

If your experience includes DEC — especially using RSX11, RSTS/E, Intel, Motorola Micro or Interdata 32 — don't even apologise for calling at 11 p.m.

If you also have a degree — computer science or other maths orientated subject — we'll wake up even faster.

Applications: Commercial business systems, Customer support — various roles, Process control, Flight simulation, Micro processing, Word Processing, Communications — tele and otherwise Message switching, Lecturing and training, Military systems, Automatic test systems.

Locations: Londn, Home Counties and further afield — including W. Europe.

Ring Real Time Mini's 24-hour, personal answer hot line now — 01-836 9711 or 1982. Day and night, ask for Torgil McLaren.

COME TO WHERE THE HILLS ARE GREENER

— AND CLOSE AT HAND!

Our Client, Cara Data Processing Ltd., is a wholly owned subsidiary of Aer Lingus and the largest computer services organisation in Ireland. Over the past four years, the company has tripled its turnover, expanding rapidly both at home and overseas. Accordingly, there are now exceptional career opportunities for talented computer personnel, based in Dublin. It is an opportunity not only to develop your career but to enjoy a most attractive lifestyle. Dublin is still only half an hour's drive from mountains and countryside. It both respects and inspires you, read on...

CARA operates four main divisions: Consulting, Computer Hardware, Caribut (interactive time-sharing) and a Data Centre Division. The latter is based on IBM and Honeywell computers and markets packages such as Carapay, Caradebt, Cashmaster (Creditors) and Financialman (Nominal Ledger). It is also involved in the development and maintenance of custom-built systems.

A number of vacancies now exist for professional D.P. staff based in the Data Centre in Dublin: —

SYSTEMS ANALYSTS/ LEAD PROGRAMMERS

with considerable programming and systems experience involving a number of major projects.
Salary Scales: £5,926 — £8,276.

SENIOR PROGRAMMERS

with a minimum of 3 years experience.
Salary Scales: £5,556 — £6,756.

For both vacancies a knowledge of IBM 360 Assembler or COBOL is desirable.
So if you would like to move to Ireland and into a flourishing career, write at once, enclosing a Curriculum Vitae to Barry Crowley at

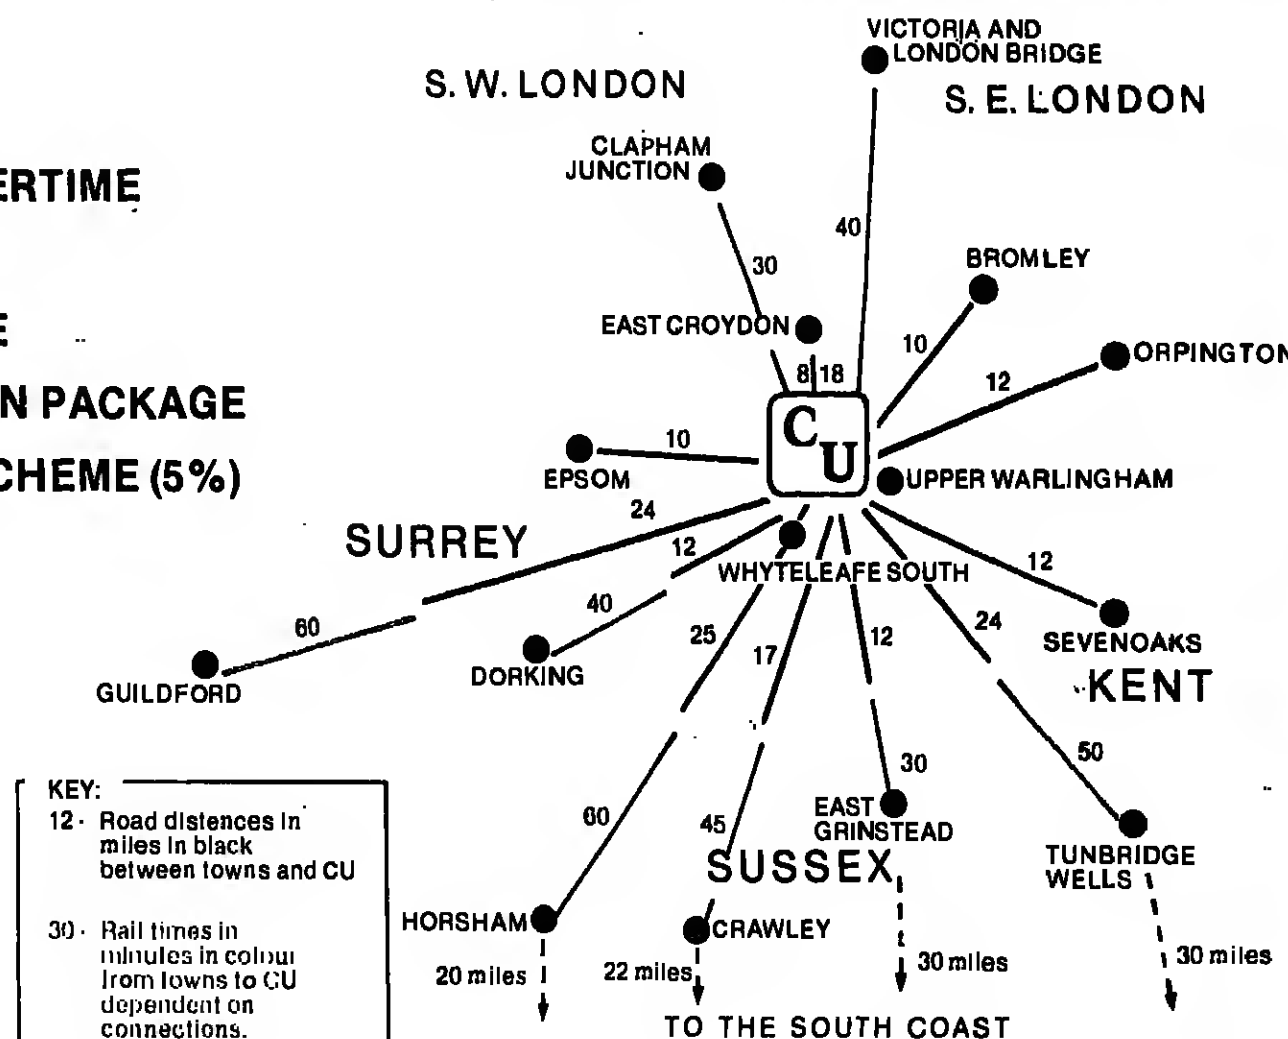

PARC,
P.O. Box 834,
Wrights Lane,
Kensington,
London W8 6SR.

ASSURANCE

YOU ARE CLOSER TO WORKING FOR COMMERCIAL UNION than you THINK!

- ★ GOOD SALARIES ★ PAID OVERTIME
- ★ REGULAR REVIEWS
- ★ 33½ HOUR WEEK ★ FLEXTIME
- ★ COMPREHENSIVE RELOCATION PACKAGE
- ★ PREFERENTIAL MORTGAGE SCHEME (5%)
- ★ EXCELLENT PENSION PLAN
- ★ FREE LIFE ASSURANCE
- ★ FREE LUNCHES
- ★ AMPLE CAR PARKING
- ★ TWO STATIONS NEARBY:
Whyteleafe South, Upper Warlingham.
- ★ EASY COMMUTING FROM:
Central London, Kent, Surrey and Sussex.

Q. Which company is advertising for Programmers?

A. Commercial Union Assurance Ltd.
Q. What level of experience do I need?

A. At least 18 months as a COBOL or ASSEMBLER programmer, on any machine.
Q. Where would I work?

A. In modern offices, pleasantly situated, at Whyteleafe, in Surrey.
Q. How would I travel?

A. By car — no traffic jams, pleasant country roads, ample car parking.
By Train — Whyteleafe South B.R. Station is almost opposite the offices and Upper Warlingham is readily accessible.
Q. What if I cannot commute?

A. The company offers an excellent relocation package.
Q. If I relocate can I visit the area and, if married, bring my spouse?

A. Of course — the company want you to be settled. Personnel will assist with temporary accommodation and any other problems.
Q. Will I improve my earnings?

A. Probably, but of course it depends on what you currently earn. Starting salaries will be reviewed after six months and the company has cost of living and performance reviews in June and March each year.

Q. Is it a vast installation with problems of scale?

A. The installation will shortly be a large dual 3031, operating under MVS, and using ROSCOE. Distributed Processing is currently being trialled for a large branch network. However project team organisation creates generally small, closely knit teams with a combination of analysts and programmers at all experience levels.
Q. Are the benefits real?

A. Definitely so and they are available to all after a short qualifying period.
Q. How does the preferential mortgage scheme work?

A. With the CU scheme you only pay 5% interest and mortgages are more readily available, at significant levels of advance.
Q. Is there a Pension Scheme?

A. As you would expect with a major insurance company, an excellent scheme which has only a 2% contribution. Life Assurance cover is four times annual salary.
Q. How can I improve the quality of my life?

A. The working week is only 33½ hours. There is flextime so you can start as late as 10am or finish as early as 4pm.
Q. If I work longer can I earn more?

A. If overtime is necessary you are paid for the extra work performed.
Q. Will I be expected to undertake standby duties?

A. Yes, on occasions but when you do generous payment will be made.

Q. Can I eat locally and are there luncheon vouchers?

A. Better still there is a restaurant on site and meals are free.
Q. Does the company encourage sport and recreation?

A. Yes, the company has its own sports ground in Kent, with facilities for most sports. Also at Whyteleafe there is a recreation area with facilities for snooker, table tennis etc and an active chess and bridge club.
Q. Will the company train me?

A. In all the skills you need to equip you for the work you will be undertaking. This includes other programming languages, new equipment and different responsibilities.
Q. Is there a career path?

A. There are many. You may wish to stay in programming or move to analysis. Either way you can progress as quickly as your ability and willingness to accept more people or technical responsibility permits. Promotion is on merit and will occur as appropriate — It is not dependent upon waiting for the annual performance review.

Systems Analysts

3 SYSTEMS
CONSULTANTSC. LONDON
£7,000 + PROFIT SHARING
+ CAR

A small but active software house based in SW London needs 3 systems analysts for the following major applications. The first analyst needs to have ICL 2903/4 or 1900 OII experience of 4 years or more, to work on a major financial application. The second needs to know the 2900 machine as this involves an interesting MIS conversion and upgrade from an existing ICL 1900. The third consultant should have stock & production control experience for an ICL 2900 under VMCS, using TP and IOMs. All three vacancies offer attractive working conditions including 4 weeks' holiday and 9 months' sick pay. CW 19/1.

JUNIOR AND
SENIOR CONSULTANTS

£ NEGOTIABLE CENT. LONDON

Six large, well-established consultancies wish to recruit systems people with all-round experience on third generation equipment and the right personality to deal with clients who require literature service. Technical Communications Consultants are also required where in-depth implementation experience of IBM or OEC latest ranges essential. Excellent fringe benefits and prospects. CW 19/2.

Recruitment Consultants
UNIVERSAL COMPUTER ASSOCIATES LIMITED

SYSTEMS ANALYST
MID-MIDDX. to £7,000

Our totally involved in redesigning, virtually from scratch, all the company's applications for a large Electronics subsidiary of this international organisation. Some of the systems, which will be running on this sophisticated IBM computer, will use the latest DATABASE techniques. With 2 years or more systems experience (any machine) you will share in the following excellent benefits - removal expenses, 4 weeks' holiday, 4 weeks' sick pay, and subsidised canteen serving great food. CW 19/3.

SYSTEMS ANALYST
MID-MIDDX. to £7,250

Our clients, who are a major garment manufacturer with an advanced IBM 370 OOS/VS installation, require a systems analyst who can contribute experience in the manufacturing or commercial systems area. The company uses screen coding and interactive programming as part of its advanced approach to computing, and a career with them would be highly beneficial. Perks include CPS, 4 weeks' holiday, a subsidised canteen and staff purchase scheme. CW 19/4.

SYSTEMS ANALYST
W. LONDON to £7,000 + CAR

A car manufacturer of world renown wishes to recruit a qualified systems analyst to enhance and develop manufacturing and commercial systems on their IBM and OEC real-time installations. Programming background in the advanced but simple systems area. The company uses screen coding and interactive programming as part of its advanced approach to computing, and a career with them would be highly beneficial. Perks include CPS, 4 weeks' holiday, a subsidised canteen and staff purchase scheme. CW 19/5.

SYSTEMS ANALYST
WELWYN GARDEN CITY
to £7,500

An international pharmaceutical organisation with a major investment in the latest IBM OOS/VS CICS OLI installation requires a systems analyst with a proven record of systems implementation to work on a variety of business systems. Make a real contribution by joining a company with excellent in-house training and offering relocation expenses, CPS, 4 weeks' holiday, and free BUPA. CW 19/6.

SYSTEMS ANALYSTS
N. LONDON to £7,000

One of the most famous Finance houses in the country using IBM mainframes, is seeking young systems analysts wishing to enlarge their previous 2 years' systems experience and work on a variety of financial, reporting and MIS applications. Being a large but friendly company with first rate office and facilities they can offer 4 weeks' holiday, Non CPS and subsidised canteen. Your particular machine experience is not important, neither is a programming background essential. CW 19/7.

SYSTEMS ANALYSTS
N. LONDON to £6,500

Our clients, based in N. London, are one of the most successful manufacturing and exporting companies in the UK. Being manufacturing oriented they have a variety of systems on their IBM 370 which incorporate the use of OLI/1 and IBM's COBOL. If you are interested in this side of DP and want a job with a future, contact us now. They offer relocation expenses, CPS, 4 weeks' holiday, and an annual bonus. CW 19/8.

SENIOR
SYSTEMS ANALYST
MID-SURREY £6,500

Why not join a company based in a lovely part of Surrey? This major household product manufacturer has a large and sophisticated IBM system and has no other than the latest IBM 4341 computer. A senior commercial analyst is needed to work on a range of new sales accounting and stock order entry systems. Along with relocation expenses, other company benefits include CPS, 4 weeks' holiday, annual bonus and an active Staff and Spouse Club. CW 19/9.

SYSTEMS ANALYST
MID-SURREY £6,000

This vacancy is for the above mentioned company with latest IBM 4341 computer on order. The post of systems analyst could suit an early career programmer who wishes to progress into straight systems design. Has a manufacturing background would be an advantage with a minimum of 3 years' DP experience. CW 19/10.

SYSTEMS ANALYSTS
SLOUGH £5,500 to £8,000

Join this growing internal services department of a major household and industrial products organisation. Having the latest ICL 2904 plus Camport mini computers, this company can offer a really great future. A manufacturing background would be advantageous without necessarily having programming experience. Perks include relocation expenses, 4 weeks' holiday, CPS, and a subsidised canteen. Full training will be given and promotional prospects are excellent. CW 19/11.

Quality first

We are confident of a
successful and exciting
future. ARE YOU?

Systems Designers Limited needs computer professionals at all levels to work in very nearly every field of computer operation, not only in the UK but also in Europe, the Middle East and the USA. Although a large amount of work is centred around our Camberley, Frimley and Manchester offices there are many long term projects which offer opportunities to see other countries throughout the world. Our continuing requirement is for staff at all levels. We are looking for final year graduates as well as experienced software and systems professionals. Salaries are negotiable up to £12,000 p.a. according to ability and experience.

Systems Designers controls and encourages the career progression of its staff giving them a wide variety of experience of both project applications and computer systems. The company runs a productivity bonus, insurance and pension schemes and offers assistance with relocation.

Telephone Ann Gregory for an application form and further information about the company or write to:
Bill Hockley, Operations Director, Systems Designers Limited
1 Pembroke Broadway, Camberley, Surrey GU15 3XH
Telephone Camberley (0276) 82244

Systems Designers Limited has an unrivalled reputation in modern computer technology as applied to mini and micro computers in real-time environments. This reputation is resulting in a company-wide expansion plan, which offers plenty of opportunity to the right people. We are British, independent, currently 200 strong and confident of a successful, exciting future.

Our principal work areas are currently:

COMMUNICATIONS: Message switching, telex systems, Communications management systems, computer communications.

INDUSTRIAL: Process control and monitoring, plant control simulation, high speed data analysis, distributed microprocessor systems.

MILITARY: Modelling, avionics and radar systems, complex rigs, emulators, microprocessor missile systems.

SOFTWARE PRODUCTS: Compiler technology, software design techniques, MASCO, information processing systems, STATUS and VIEWDATA systems.

CONSULTANCY: Complex military systems software and systems development technology.

CHELMSFORD
BOROUGH COUNCILCOMPUTER
PROGRAMMER

Post No. 19

Salary Range £4,245 to £5,073 p.a.

The Council requires a man or woman with at least twelve months' programming experience in RPG, Cobol or other high level language. The appointment will be made at a point on the scale corresponding to the successful applicant's qualifications and experience with progression to the maximum by annual increments subject to satisfactory service. The annual pay award for local government services is due on the 1st July and this will enhance the salary scale offered.

Housing accommodation will be considered in suitable cases and the successful candidate, if he needs to move, can benefit from the payment of removal expenses and certain other resettlement allowances.

The Council's computer is a Univac 90/25 with discs and magnetic tapes and it is currently being upgraded with the addition of a V.D.U. and extra store. An interesting variety of applications is being handled, and the successful candidate will play a part both in the development of on-line facilities and in the preparation of programs for new applications.

Application forms may be obtained from the Personnel Officer, Civic Centre, Chelmsford CM1 1JE, to whom they should be returned by 21st May, 1979.

MYRIAD
OPPORTUNITIES
IN SALES

South Of England

1st Year c. £8,000

Our client is a leading member of the fastest growing electronics group in the U.K. They manufacture and market a highly successful and respected range of sophisticated data-communications systems, and are well established as European market-leaders in this field.

In order to keep pace with the success of, and heavy demand for, their powerful range of products and in order to continue the development of the business in forthcoming years, the company is now seeking to enhance its field sales force, and is therefore able to offer a number of unrivalled opportunities to sales executives with the determination and ability to succeed in a demanding yet highly rewarding environment.

The ideal candidate will offer previous experience of selling data communications systems. However, a successful track record in any computer or electronics related field is also relevant, since the ability to communicate effectively with senior management in either technical or general terms is an important consideration.

A comprehensive period of thorough orientation will be given to prepare the appointed persons for success in the field. The substantial base salary is enhanced by a generous commission scheme, which is guaranteed for an initial period, and the provision of a company car. In addition, a valuable range of fringe benefits is offered, including twenty-four days holiday, making these exceptional opportunities to join one of the success stories of British industry particularly attractive.

Programmers/Systems Programmers/
Designers/Project Leaders & Consultants.

Make a strategic move to Dataskil

When you make your next move you will be looking for greater job satisfaction and increased status and salary.

At Dataskil you are an integral part of the organisation rather than a member of a service department. However successful you are now, we can help you build on this success.

Government Services Department is very successful. Its success is directly attributable to the quality of its staff and complexity of the projects it handles. Our staff work on assignments both in the UK and Europe and on projects which cover the whole spectrum of ICL equipment from the tried and tested to the 'just announced'.

We are looking for programmers, systems programmers, systems designers, project leaders and senior consultants. We will base you in Cardiff, Bristol, Reading or London to suit your preference and to ensure minimum disturbance to your domestic life or life style.

The experience we are looking for falls broadly in the following categories:

2-4 years experience
£4000-£5500

People experienced in 2900 and 1900 COBOL, Fortran and/or 2903 RPG2 and COBOL. There could also be vacancies for graduate trainees who have spent 1-1½ years as trainees with a manufacturer and now want to move over to development work.

5-8 years experience
£5500-£7500

Similar experience as before, but with a greater depth of experience in complicated applications development projects, probably as a designer or project leader. There are also vacancies for systems programmers with large operating systems experience. George 3 for example or TP systems.

8 years +
£7500-£12,000

Here we are looking for people prepared and able to act as consultants whether in the area of applications development or software programming and/or on-line and TP systems.

If you are interested please phone: Gerry Grundy, Mahen Tampoe, or Tony Curran at Reading (0734) 581255 or write to one of us at: ICL Dataskil, Reading Bridge House, Reading, Berks RG1 3BN. Please quote reference CW 1375.

SMA

Data Processing Manager

Hi-Fi Distributors, c.£9,000 plus car

Our client is a highly successful and rapidly expanding distributor of high fidelity and associated equipment in the United Kingdom. At their head office and principal warehouse in Buckinghamshire they are beginning the development of their existing Burroughs B-80 system to meet the needs of their rapidly growing business. They wish to appoint a Data Processing Manager to develop their data processing activity and control their existing systems whilst this is taking place. This is an exciting opportunity to create a department almost from scratch and take an active part in the company's growth. Applicants, aged 28-35, should be graduates or have an equivalent professional qualification, with exceptionally relevant experience. They should be familiar with Burroughs or other manufacturers' systems. Experience in a distributive trade and associated financial systems would be an advantage. They must be prepared to take an active part in all levels of the data processing function, but the main requirement is for a person who is capable of offering sound advice on the most effective means to be employed. This is a unique opportunity for someone to develop their design, development and managerial skills. Salary will be negotiable around £9,000 per annum, a company car will be provided, and there is the usual range of other company benefits. For an application form, men and women are invited to write or telephone in confidence to Geoffrey Laycock at the address below (telephone 01-229 6742) quoting reference No. 600/CW.

SYSTEMS

OUTSTANDING CAREER OPPORTUNITIES AT S.E.L. COMPUTERS LIMITED FOR EXPERIENCED FIELD ENGINEERS AND SUPPORT ANALYSTS

THE COMPANY — S.E.L. Computers Limited, a fast growing and leading supplier of high performance 32-bit mini computers for the most advanced technical and real time applications, with headquarters in Fort Lauderdale, Florida, has a well established operation in the U.K. and an impressive list of customers in Aerospace, Government, North Sea Oil, Industry and Electricity and Gas supply.

Our rapid growth means we need:

FIELD ENGINEERS: ALL LEVELS £5,000-£7,500 — CAR — NORMAL BIG COMPANY BENEFITS

Applicants must have at least eighteen months' experience in a computing environment, preferably in high performance mini or mainframe computers, with training in OEM peripherals, Perceq equipment, Data Products and Control Data discs.

Location: Kingston, S. London, N.W. London and Surrounding Area.

SUPPORT ANALYSTS: £5,000-£11,000 — CAR — NORMAL BIG COMPANY BENEFITS

Experienced software professionals are required for pre and post sales support. A background including in-depth knowledge of operating systems, compilers and general scientific computing is desirable. In addition to support of S.E.L. products, these posts offer an opportunity for involvement with the latest developments in a wide range of technical application areas.

Location: S.W. London.

Men and Women interested in joining this young and expanding company, please: 01-643-8020 — or write with career details to: Mr. M. Woolger — Engineering

Mr. M. Fishburn — Software Support

Career Path From Operations... ... Into Systems Programming

Reigate, Surrey

Good Salary +
Excellent Benefits

This is a unique opportunity for an Operator, Senior Operator or Shift Leader to break out of operations into Systems and Software programming, tuning and amending IBM software, writing in-house software etc.

The client, a professional organisation, is transferring onto IBM equipment. Initially an IBM 370/125, eventually a 4341, possibly under VM/CMS. The successful applicant would work closely with the Systems Programmer who has extensive IBM experience. Whilst relevant IBM experience would be useful, we feel this opening will suit a person of good academic standard, with an aptitude for programming, of smart appearance and with a professional attitude.

We strongly recommend this position, for more details or an initial discussion, write, return the coupon or telephone the number below. Positions open to male and female applicants. Quote ref: CW130 ST.

Please send me more details of the Junior Systems Programming position.

Electronic Engineers: Would you know a good idea if you saw one?

Benjamin Franklin really knew what to make of a good idea when it struck him. If you do too, then we'd like to hear from you. Because we're looking for people to get some great ideas off the ground at our production unit in Rugeley. With the help of our expanding development teams we're moving into completely new areas, utilising the very latest in micro-electronics technology. In fact, we're already a world leader in industrial electronic control systems. But it's a field where innovations come thick and fast. And only the expertise and imagination of people like you can make sure we stay out in front. Where we belong.

Computer Systems Design Engineers

We're looking for someone with proven ability in one or more of the following areas: PDP 11 ASSEMBLER, CORAL 66, FORTRAN, RSX 11-M, INTEL 8080 FAMILY ASSEMBLER.

But if you have related experience in other areas we'll also consider you for the job.

With any of these jobs you'll get an attractive salary and good conditions of employment. Plus prospects as good as you'd find anywhere in the industry.

We're based in a pleasant part of South Staffordshire. The housing is reasonably priced. And if you have to move we'll really help with the expense.

So why not contact:

The Personnel Office: Thorn Automation Limited,
PO Box 4, Rugeley, Staffordshire.
Tel: Rugeley 5151.

It could be the best idea
you've had in ages.

Applications are welcome
from both men and women.

Read this if you want to make a career in Holland as a SYSTEMS ANALYST

(Salary £10,000 to £14,000 per year)

THE COMPANY

Intercontinental Transport (ICT) BV consists of a group of companies which, under the name INCOTRANS, is involved in all areas of transport. Thanks to our specialised know-how and experience the Incotrans group can effect all types of transport, such as ocean transport, coast traffic, river shipping, road transport and air transport. To complete our services we can also offer our clients extensive facilities in stevedoring, factoring, warehousing, insurance and documentation.

THE JOB

We are inviting applications for the position of EXPERIENCED SYSTEMS ANALYST in our Rotterdam Electronic Data Processing Department. The systems development department works via R.J.E. to an IBM 370/149 in Gollenburg. For the real-time system SPEED we are using four connected Data General Eclipse computers (4 x 256Kb, 6 x 200Mb discs), placed in Rotterdam, Antwerp and Bremen.

QUALIFICATIONS

The applicant who will primarily work with the SPEED development should be fully acquainted with E.D.P. matters like

"data bases" and "distributed systems". The computer language used in Incotrans is "COBOL". Candidates with shipping experience are preferred.

WHAT WE CAN OFFER

An interesting position in our office in the world's largest port; pleasant working surroundings; a good salary plus the usual big company benefits and conditions and, of course, our assistance in finding suitable lodging.

YOUR APPLICATION

If you are interested in this job please send your application to the Personnel Department of Intercontinental Transport (ICT) BV, Wilhelmskade 39, 3072 AP ROTTERDAM, Netherlands.

Computer Manager

£4,953-£5,253

EWELL

To manage a small team of Computer technicians and supervise the day-to-day running of a UNIVAC V76, twelve terminal multi access system provided a service to the college and local schools.

You should be a competent programmer who wishes to gain management experience whilst continuing to develop programming skills. Some knowledge of block structured language would be an advantage. The post which is open to men and women offers responsibility as well as an opportunity to maintain technical proficiency. Thirty-six hour week. Twenty days paid holiday a year.

Application form from the Chief Administrative Officer, North East Surrey College of Technology, Reigate Road, Ewell, Epsom, Surrey, Tel. 01-384 1731.

**ROYAL MILITARY COLLEGE OF SCIENCE
COLLEGE OF SCIENCE
SHRIVENHAM, SWINDON, WILTSHIRE**

VACANCIES IN OPERATIONAL RESEARCH

The Operational Research Branch of the College has a limited number of vacant research posts at Senior Research Scientist / Higher Research Scientist / Research Scientist level. Successful candidates will join small multi-disciplinary research teams working on problems of current interest to the Ministry of Defence and other Government Departments. An interest in computer simulation / scientific programming or scientific planning is desirable for some posts but essential requirement is that candidates show a broad and enquiring outlook. Appointment at Senior Research Scientist level requires a military background, plus an ability to lead a research team. Applicants should have a good first degree in any scientific or engineering subject for this grade. Appointments will be for 2 or 3-year period in the grade of Senior Research Scientist (4 years post degree experience minimum), salary scale £4101-£8448 p.a. / Higher Research Scientist (2 years post graduate experience minimum), salary scale £4101-£8448 p.a. / Research Scientist, salary scale £2839-£4415 p.a. depending upon qualifications and experience. Applications, forms and further information from the Civilian Admin Office, Royal Military College of Science, Shrivenham, Swindon, Wilt SN6 8LA. Telephone 0793-782651 extension 421.

Closing date for applications 26 May 1979.

ANALYST/ PROGRAMMER £6-7k ENFIELD

Here is the opportunity to fully develop your skills as a systems analyst.

By joining a small and friendly department you will become involved in a wide range of applications from basic accounting systems through to on-line order entry and stock control. The installation is a Univac 90/30 for which our client intends developing other systems necessary to match their expansion programme.

Our client is a major manufacturer supplying the construction industry with a comprehensive range of nationally known products.

To be considered for this position you must be presently employed as a Programmer/Analyst, be educated to at least 'A' level standard, have been in DP for 4 years or more and gained good COBOL experience.

If you have these qualifications the starting salary is within the quoted range in addition there are re-location expenses where applicable, contributory pension scheme, subsidised canteen and sports and social club.

For full details send an application form please write, or telephone to Miss Erica Beresford at these offices —

Sales Engineers

CalComp is the world's leading manufacturer of Computer Aided Design and Drafting Systems and in the last 2 years alone has doubled its turnover in the U.K.

To continue our expansion plans we now need two further Sales Engineers.

Products and Territories

The successful candidates will be responsible, after initial training, for selling our full range of graphic systems, including plotters, digitizers, controllers and electrostatic systems.

One Sales Engineer will report to our southern area manager, based at Bracknell, and cover London postal, part of Surrey, Sussex and Kent.

The other one will report to our northern area manager and cover the Manchester and Birmingham areas.

Qualifications

We would expect the southern area candidate to live in the designated territory and preferably within reasonable distance of Bracknell.

The northern area candidate would work from home which ideally would be in the Manchester or Birmingham areas.

We would look for the following experience and background:

- 2-3 years selling experience, preferably in the sale of Computer Related products.
- Technical background and an understanding of scientific and engineering computing applications.
- An understanding of Computer Aided Design and Computer Graphics which whilst not being essential, would be a distinct advantage.

Rewards

These are first class opportunities to develop your sales career and grow with an expanding company.

We offer good negotiable salaries, commission, company car and usual big-company fringe benefits.

To apply, please write to, or telephone, Don Crowle, CalComp Limited, Cory House, The Ring, Bracknell, Berks. Tel: Bracknell 50211.

CALCOMP

Analyst/Senior Programmer

To lead a team responsible for the detailed design of interactive and batch mode information processing systems, using a GEC 4070 computer. You should have at least 5 years' experience in assembly and high level languages including FORTRAN IV and you should also be familiar with at least one Operating System and Job Control Language. Experience of multi-access systems and a knowledge of BASIC and CORAL 88 are desirable.

Programmer

For flowcharting, writing and testing of programs, using a GEC 4070 computer.

Reporting to the Senior Programmer, you should have a minimum of two years' programming experience in FORTRAN, and at least one assembly language. Some knowledge of BASIC and CORAL 88 is desirable.

Please telephone for an application form or write quoting ref: P/87 101

AMBITIOUS ANALYSTS

SYSTIME is one of the most successful companies in the field of mini computers.

Our success in the last six years has been achieved using two important elements. One, a top range of products and back-up facilities and two, by employing only the most experienced and ambitious people in the business.

The inherent enthusiasm and team spirit within the company has enabled us to develop a highly efficient and profitable organisation in which individual talent and drive can earn just rewards.

We are looking for:—

SENIOR ANALYSTS ANALYSTS/PROGRAMMERS in London and Northampton

with good commercial experience in a wide range of applications.

If you have a good knowledge of business systems and/or production control and wish to develop and extend your ability to the full, Systime is the company to work for. Real opportunities exist for you to increase your responsibilities and income.

We offer attractive salaries, bonus scheme, car allowance and a comprehensive benefits package.

Interested? Then contact Chris McDonnell on Leeds 707411 or write with brief details to:

Systime Limited.,
Concourse Computer Centre
432 Dewsbury Road
Leeds LS11 7DF.

(Ref. V.7)

SYSTEMS TRAINING
MANAGER
c. £12,000 p.a.
(Ref. V.8)

Ashanti Goldfields Corporation
(Ghana) Ltd.

Applications are invited for the above vacancies, which may be of particular interest to computer professionals wishing to progress their career and broaden their experience in an overseas environment.

The installation in Ghana, West Africa, comprises an ICL 1901T, 48K, with EDS 80 and local AVDU's with teletypes. Installation conversion to 2800 Series is under consideration.

Applicants for both positions should ideally have past experience in a similar size installation, where they have had extensive involvement in systems and programming maintenance and development.

The Computer Manager will be responsible for the administration and day-to-day management of the Computer Department and must be able to oversee all projects and operations by detailed participation.

The Systems Training Manager will be responsible for the design and implementation of system improvements, modifications and development, and will be expected to train local staff in Systems Design, Analysis and Implementation.

Experience of working overseas and possession of formal computing qualifications will be an advantage.

Conditions of service are in line with modern expatriate practice and include:

- 5 year contracts
- 10 month foreign tours with 2 months' leave for the Computer Manager
- 15 month foreign tours with 3 months' leave for the Systems Training Manager
- Family passages each tour
- Provident, gratuity and life assurance schemes
- Staff primary school/education allowances
- Free furnished accommodation
- Good sporting facilities

Please write in confidence, quoting appropriate reference to:—

ASSEMBLE YOUR EXPERIENCE BECOME A SPECIALIST AND EARN UP TO £7500

Do you have three years Assembler programming experience to your credit? Then here is an opportunity to progress further and become a specialist as a SYSTEMS PROGRAMMER with a world leader in oil field services.

This position provides an exciting opening for someone who is ambitious with a strong technical bias and wishes to develop into systems programming.

In addition to being responsible for maintaining operations systems software you will assist in selection of hardware and software whilst fulfilling an essential consultancy role concerning database communications systems within the department.

Some knowledge of database and data communications would be an advantage but you will be thoroughly trained in all aspects of the work by the Chief Systems Programmer. The DP department, a young and dynamic one, is at present engaged on many new projects throughout the world and career prospects are excellent so you can expect to progress rapidly. The mainframe is an IBM 370/125 running under DOS/VSE. This department also has an IBM System 34 whilst the 4341 is on letter of intent.

In addition to the salary mentioned you will partake of the benefits normally associated with a major international company. Why not take this chance to progress in a positive direction, and phone or write to Mrs Ann S Jones, Cripps, Sears and Associates, (Personnel Consultants), Burne House, 88/89 High Holborn, London WC1V 6LH. Tel. 01-404 6701.

City of
Manchester
Treasurer's
Department
Systems Analyst
£5,727-£6,080
including £312 p.e. supplement

An additional post has been created in the City Treasurer's Department to co-ordinate data processing activity in the City's Direct Works Department.

The City operates a large mainframe computer with over 80 video terminals on behalf of all Departments of the City Council. Experience of equipment similar in extent is required.

The Direct Works Department is responsible for maintenance of City Council properties, including over 100,000 dwellings, and is also involved in new building projects and in servicing of lifts and other plant. Stores, costing and payroll work is already done on the computer and the Direct Works Department is anxious to develop quickly into the areas of estimating, resource planning, valuation of work in progress, bills of quantities, etc. A knowledge of the building trade would be a great advantage.

A 35-hour week is in operation, with a flexible hours system, and there are excellent sickness, parental and annual leave provisions. Assistance with removal expenses may be given.

The City Council operates a Union Membership Agreement under which a new employee is required to become a member of a recognised Union.

Please write to the City Treasurer, P.O. Box 314, Town Hall, Manchester M60 2JH, giving personal particulars and details of experience and qualifications.

Rochdale is situated 12 miles north of Manchester on the edge of open moorland. An I.C.T. 2880 system has recently been brought into operation and the machine and staff are located in purpose-built accommodation in New Market Office.
The Authority has a continuing development programme for the next three years. The successful candidate will occupy a vital post in the Systems and Programming Team of the Local Authority. Experience should be in the field of systems analysis and programming. The successful candidate will be responsible for the design and development of the system. The successful candidate will be responsible for the design and development of the system. The successful candidate will be responsible for the design and development of the system.

CUSTOMER SERVICES MANAGER

£12,000 - £15,000 + Car

Location: Home Counties (North)

Our client — who manufactures and markets mini-computers in both OEM and End-user customers — seeks an experienced manager to take control of its field service activities and in-house repair facilities.

He will be responsible for managing an expanding department providing contract and on-call maintenance service for the company's products throughout the UK. In addition, he will manage the repair centre handling equipment sent in from the company's customers and distributors both at home and overseas as well as from its European subsidiaries. Both divisions are expected to run at a profit, and suitable candidates will have demonstrated their success in managing people and controlling resources, probably at branch level in a large organisation.

Interested candidates should submit a curriculum vitae (in total confidence) to:

SALES SOUTH OF THE THAMES TIMESHARING

£10K Basic Earnings Targets
£25K+ Potential
+ Car, Expenses, etc.

There have to be some very good reasons for successful Salesmen to change companies mid year.

Some of the good reasons you can see above, but it is the way you achieve £20K+ that is significant.

- Multiplies that double and treble your percentages and no calling on earnings
- Up-to-the-minute products including financial planning and database
- First rate technical support
- No frustrating management structure
- Outstanding company growth

Plus, you do not need a timesharing background. If you can sell ideas, that is enough. Check the facts now by calling me, GEOFF MARSH, on 01-499 4501.

Ref: RW 19/3

REAL-TIME SYSTEMS DEVELOPMENT

£ neg'l Berkshire

This company is a small, but fast expanding, software house, backed by a large British industrial concern, which has invested heavily in in-house development and testing facilities.

The main thrust of the business is in real-time systems for large scale control applications. In their chosen field, they are one of the most technically advanced companies in the world — for example, colour graphics feature prominently in their systems.

The hardware used has for the most part been DEC PDP/11 range and/or RSX 11-M, but more and more use is being made of micro-technology (LSI/11, Intel 8085, etc).

If you have programming experience in either high or low level languages, and have an interest in this kind of system, please give me a call. You may well find that the rewards to be gained in this congenial company are very tempting.

Contact: A. P. BAKER on 01-499 3401.

Redifon Computers Limited

Sussex

Diagnostic
Programmers

Salary Negotiable
C. £7,000

Software
Programmers

£5,000 — £7,000

A subsidiary of a major British group, Redifon Computers Limited is the second largest British owned computer manufacturer with installations in the UK, Eastern Europe and the Middle and Far East. The company product range includes distributed processing and sophisticated data entry equipment with extensive telecommunication facilities. Product development makes significant use of both mini and micro computers.

There are immediate opportunities for DIAGNOSTIC PROGRAMMERS to work with test programs for new product development, hardware design engineering, field engineering and quality assurance testing. An engineering background, with experience of mini and/or micro computer Assembler languages and the ability to identify and solve problems, both practical and theoretical, is required. Particularly relevant hardware is Intel 8080, Zilog Z.80 and D.G. Nova.

SOFTWARE PROGRAMMERS will need at least 2 years experience of Assembler level programming, preferably with a working knowledge of one or more high level languages. Software for existing and new products is currently under development and opportunities exist to progress into a number of specialist areas.

The package offered includes an excellent starting salary and a number of benefits including, if appropriate, an excellent relocation package.

Positions are open to male or female applicants. Please telephone (24 hour Ansaphone) to discuss or write to our CROYDON office, quoting ref: CW 136-9J.

MYRIAD TRAINEE BUSINESS ANALYSTS

WEST LONDON AND CITY
c. £4,500 + BONUS

A rapidly expanding international organisation offering advanced software products is seeking additional staff at junior levels to join the company and be trained as Business Analysts. The successful applicants will function in both a programming and design capacity and will have the opportunity of gaining experience with powerful database and financial software techniques.

Applicants should offer a good academic background together with commercial experience gained in a computing environment. Personality and the ambition to succeed, rather than technical ability, is of prime importance to our client.

The company offers an excellent starting salary plus an attractive bonus package, geared to both individual and team performance, of approximately 10%.

OPERATORS—BIRMINGHAM

An opportunity to move into Programming

Full training provided
£3,500 p.a. plus overtime

Our client, a large engineering organisation, running commercial systems, offers an operator with 12 months' experience the move into programming. For the first twelve months, you would work as an operator, DAYSHIFT only, and then progress into a trainee programming position. During this time, the mainframe will be phased out, and a network of mini computers, using database and realtime techniques, will be implemented.

Full training on programming this new up-to-date equipment will be provided, and opportunities to then progress within the programming and systems area will be available.

General conditions include Bonus Payments, PAID OVERTIME, Pension Scheme and regular reviews.

This is a unique position, offering a rare opportunity to progress into programming. For a confidential discussion, please telephone Mike Hesien (021-632 6848). Ref. CW160.

MYRIAD

ANALYST/ PROGRAMMER

S.W. LONDON

c.£5,500

This position presents a good career step for an Analyst/Programmer seeking additional responsibility, or a Senior Programmer who wishes to progress towards analysis.

The company has recently made a major upgrade in machinery with the installation of a dual 3 Mb ICL 2960 VME/B configuration and has a countrywide telecommunications network. The Systems and Programming team work to professional standards and the company provides formal training to all members of the department.

The successful candidate can look forward to taking total responsibility for a number of interesting applications, involving user contact at all levels.

Applicants should be self-motivated with sound COBOL programming experience, preferably on ICL hardware, and a background in financial and commercial systems. Benefits include Pension Scheme, Flexitime and 3 weeks' holiday.

Specialist Computer Recruitment Ltd

SENIOR PROGRAMMER OR ENGINEER

FOR SOFTWARE QUALITY ASSURANCE

Sperry Gyroscopes are among the pioneers in the introduction of Quality Assurance into the development and use of software. We are now expanding our team in this field and we have created an important new position within it. The person appointed will assist in the development and introduction of Software Q.A. Techniques applicable to a number of widely differing projects.

We are looking for an innovative person with a degree, HND or HNC in a relevant discipline who should be:

- EITHER:** Experienced in Quality Assurance and have a knowledge of Software.
OR: Experienced in programming and computer techniques and wish to move into the challenging new field of Software Quality Assurance.

Sperry Gyroscopes are deeply involved in the development of operational and test software for a variety of civil and military projects, including real time applications. We can offer a suitable candidate career prospects, an attractive benefits package and generous relocation assistance.

If you believe that your skill and experience could match our technological challenge why not send us brief details of your self to-day or write or phone for our latest information package to:

The Engineering Recruitment Officer, Sperry Gyroscopes, Downshire Way, BRACKNELL, Berks RG12 1QL. Tel: Bracknell (0344) 3222 extension 818, quoting reference CW10879.

EDP Operations Supervisor

Switzerland

An important world-wide multinational bank requires a capable Operations Supervisor. He will be based in Switzerland, and be Chief Operator in charge of the 370/148-VM Control, with VM/370, DOS/VSE, CICS, FJE, POWER and VTAM. The right man will have had of least four years' computer room experience — a year of which must have been in the capacity of senior operator. A good knowledge of on-line systems, JCL and work control procedures, is essential. With English or French as mother tongue, he should have a working knowledge of German. This is a professional responsibility with much potential. The salary package is excellent and the other conditions are equally attractive. As the position is regional, persons interested should write direct to the authors below. Strict confidence is guaranteed.

CLASSIFIED COPY

All classified copy should reach our offices no later than 5.30 p.m. on the Monday preceding Thursday's publication. If complete artwork is supplied 12 noon on a Tuesday.

Ring David Abbey for further details on 01-261 8016.

SYSTEMS PROGRAMMER

London up to £6214

British Gas requires a Systems Programmer to join a small team providing software support for large main frame computers. The current in-house computer is from the Univac 1100 range.

This computer provides a bureau service to British Gas Headquarters departments and is also used in connection with control of the National Gas Transmission System.

The team is responsible for all aspects of software support and is also involved on other computer-orientated specialist projects.

The post initially involves the maintenance and development of the Univac 1100 Operating System and other Standard Univac and in-house software, and support to the Operation Section and to general computer users.

Applicants should ideally have a good degree and at least two years' experience as a Systems Programmer using a low level language. Familiarity with Univac 1100 systems would be an advantage, though experienced applications programmers or systems programmers on other computer ranges wishing to widen their horizons would also be given due consideration. This post will be based in Fulham.

Starting salary will depend on qualifications and experience but will be within the range £4428-£6214 (including Inner London Weighting) plus current self-financing productivity payment and the benefits normally associated with a large progressive organisation.

For further details and an application form, contact the Research Secretary, British Gas, London Research Station, Michael Road, Fulham, London SW8 2AD quoting reference LRS/314.

Senior Systems Analyst

£7,500

The Bowater Corporation Limited, Knightsbridge, London, S.W.1.

Share Registration System

The Senior Systems Analyst will be responsible for investigating the current share registration system, and developing and implementing a new system. It is a major project and will run on the Hewlett Packard 3000 computer which was installed early last year at the corporate headquarters, Bowater House. The system may employ database and teleprocessing techniques. The Senior Analyst reports to the DPM and will join a small but effective team.

Candidates should have a successful record of achievement in implementing commercial, financial and accounting systems. Experience of share registration systems would be very relevant and could command a higher salary. A good academic background, stable career record and good communication skills are needed.

Career opportunities in this expanding department are excellent and benefits include free lunches, season ticket loan scheme and free medical insurance.

Members of Computing Services Association

MICRO-PROCESSOR SYSTEM SOFTWARE

We design, produce and sell one of the most advanced Word Processors in the world — the Diamond. We are a small, but rapidly expanding company with a modest ambition — we want to make the most advanced Word Processor in the world.

To further our ambition we are looking for programmers at all levels to design and implement new software — both enhancing the existing machine and building the next generation Word Processor. Emphasis is placed on individual effort and contribution — we believe that people who want to do, and can do, a good job, should be encouraged to get on with it.

As, currently, all software is written in assembler, some assembler experience is required. The Word Processor is an extremely sophisticated text editing and formatting engine, based on small real-time system, running on a Z-80 with 64K of ram. We are also involved in communications and the continued improvement of our in-house development systems.

Salary and Job Description depend on experience and so on, but we don't think we would disappoint you! If you are interested please ring, or write to: Maureen Hicks.

SMALL BUSINESS SYSTEMS

West London Sys. 10 + 1500 £4,500-£8,500

A major international Systems House who are better known for their mainframe activities, have a fast expanding Small Business Systems Division.

They have an immediate need to recruit people who range from Programmers with 2-3 years' experience, through to Senior Project Leaders.

We would like to hear from people who have had experience of ASSEMBLER on any machine, and if you have experience of SYSTEM DESIGN, REAL-TIME ORDER ENTRY or ORDER PROCESSING so much the better. Projects are all based on Real-Time applications on the ICL System 10 and 1800 Hardware.

Project teams usually consist of 2-3 people. The main projects we are recruiting for are SOFTWARE DEVELOPMENT and COMMERCIAL SYSTEMS.

Salaries are well above market rate and the Company can offer excellent career opportunities. Annual bonus, plus usual Company Benefits one would expect from a Company of this size.

CW 19/5

DEPUTY DIRECTOR

CENTRAL LONDON C. £8,000 + car

A unique opportunity has arisen for a DEPUTY DIRECTOR to be responsible for SYSTEMS AND PROGRAMMING, in a medium-size, expanding computer company involved in auto motives and finance industries.

The installation consists of an NCR CRITERION 5670 plus a recently developed interactive on-line communication system using audio response equipment and (AOC 1500) on a nationwide basis, approximately 1000 terminals throughout the United Kingdom. A Data General mini is to be installed early in September.

The person we wish to recruit is likely to be in their mid 30s and will have the following:
SEVERAL YEARS' OF EXPERIENCE
CONSIDERABLE EXPERTISE OF MANAGING ANALYSTS AND PROGRAMMERS
TECHNICAL BACKGROUND PREFERABLY NCR

It would be an added advantage if you have in-depth experience of on-line systems and a programming background in COBOL or PL/I.

The company can offer an excellent career, and the opportunity to gain more responsibility with the growth of the company.

CW 19/7

Central Computing Consultants

8 Lower Grosvenor Place, London SW1 Telex 27950 Ref. 1035

Telephone
01-834 7105

DOCUMENTATION CO-ORDINATOR

Switzerland up to c. £15,000

We wish to recruit an experienced Technical Writer for a permanent position, with one of our Swiss clients.

The successful candidate will join a large project team, working on up to 30 men years communications systems and will report to the Manager of Software Services. The main responsibilities will include working to tight time scales on the preparation of documentation and literature of the implemented project, for users' purposes.

Candidates must have a proven track record in technical writing and be prepared to work on their own initiative, servicing the needs of the project development teams in a highly progressive company in the communications field.

CW 19/3

HONEYWELL

N.W.3 C. £5,000

Our clients, a National Transport organisation who have their Head Office in Swiss Cottage, have a vacancy for a JUNIOR ANALYST or PROGRAMMER who would like to move over to Analysis.

Their installation is a Honeywell 68/40 running under GCOS and using TDS/IDS. The successful candidate will initially train and gain experience by working with a Contract Analyst, but you will eventually be providing the base of future analytical requirements. It is envisaged that the person selected will eventually become the Senior Analyst.

Ideally, the person we are looking for will be of Degree standard, would either have had programming experience (Cobol on Honeywell Hardware) and some analysis, or a Programmer/Analyst who wishes to become a full-time Analyst.

CW 19/4

IBM SYSTEMS PROGRAMMERS

Paris based + Worldwide Travel
Salaries up to £18,500 p.a.

We have been retained to recruit three Systems Programmers for our client, a very large and influential French Computer Services company. Employing up to 2000 people worldwide, their bureau services are based on numerous IBM machines, ranging around 3031s and 370/158s down to 168s, in addition to ITEL AS6a and AS6s.

Candidates must have a thorough Systems Programming knowledge of IBM operating systems and software OS/VS1, MVS, VM and CICS, and should be able to communicate with users to advise and support the various systems.

Successful candidates do not need to speak French at present, but will be required to learn the language in due course.

CW 19/6

SPRECHEN-SIE DEUTSCH?

Mini/Software up to £17,500+ benefits

1. Siemens 330
2. Intel 8080
3. IBM DL1/CICS

One of the most prestigious software companies in Europe is currently expanding its operations in Central Germany.

Their business is based on a wide range of projects currently being developed on both minis and Business Machines.

Due to this expansion, they want to meet several Computer Professionals who are competent in German, for project development. Technical background can be widespread, but must include software developed on minis, ideally Siemens and Intel.

We would also like to recruit candidates with experience of PL/I and CICS to work on a development project. Systems Programming experience would be useful.

CW 19/8

UNIVERSITY OF BRISTOL

Programmer in Department of Anatomy and Computer Centre

COMPUTER OFFICER

Applications are invited for the post of Computer Officer which is a joint appointment in the Department of Anatomy and the Computer Centre. The person appointed will be required to write programs for, and supervise the day-to-day running of POP 11/03 systems within the Department of Anatomy, and to provide programs and give advice to members of the department using the main University Computer which is a recently installed Honeywell 80/60 Level 2 DPS supporting the MULTICS system. The person appointed will be expected to spend the equivalent of 1 day a week in the Computer Centre to gain experience of the MULTICS system so that he or she may be able to advise on its use within the Department of Anatomy.

The main computing task within Anatomy is concerned with the real-time analysis of data obtained from experiments on the nervous system.

Commencing salary within the range £3,883 to £5,804 per annum (scale under review). The University does not issue applications forms and applicants should write to Mr. T. Parsons, User Support Manager, University of Bristol Computer Centre, University Walk, Bristol BS8 1TW, enclosing applications and mentioning age, qualifications, and names of two referees as soon as possible. Further details are available on request.

UNIVERSITY OF ASTON
COMPUTER CENTREMSc. Course in
computer science
with applications

This one-year full-time or two-year part-time course starting in October has places for Graduates with a knowledge of computing. The course is accepted by Science Research Council for tenure of its advanced course student ship.

Further details from: Dr. C. H. Hunt, Computer Centre, 15 Colahill Street, Birmingham B4 7PA.

In whom application forms should be returned by 18th June.

UNIVERSITY COLLEGE, CARDIFF

LECTURER

Department of Electrical and Electronic Engineering

Applications are invited for the post of Lecturer in the Department of Electrical and Electronic Engineering. Salary range: £3,883-£7,754. Duties to commence on 1st October, 1979.

Applications (2 copies), together with the names and addresses of two referees should be forwarded to the Vice-Principal (Administration) and Registrar, University College, P.O. Box 76, Cardiff CF1 1XL, from whom further details are available. Closing date 14th June, 1979. Reference 785.

SOUTH WEST UNIVERSITIES
REGIONAL COMPUTER CENTRE
University of Bath

ICL 2980 SYSTEMS PROGRAMMER

The Regional Centre (SWURCC) runs a large ICL 2980 system connected to a sophisticated multi-computer communications network serving universities in Bath, Bristol, Cardiff and Exeter. A vacancy exists in the Systems Development Group within the Operating Systems team. This team is responsible for developing new facilities and providing technical support for the operating system, VME/8. Current developments include a high-level scheduler, message handling software, and the connection to the communications network.

The ideal candidate must be willing to become experienced in many areas of VME/8, and to generate solutions to overcome weaknesses in ICL software. 2000 experience would be valuable, as would experience of other large-scale operating systems. Salary will be at a point determined by experience and ability within the range £4,232-£7,145 per annum.

Although we hope that the successful applicant will start as soon as possible, potential candidates who cannot start for several months should not be deterred from applying. Application forms and further details may be obtained from the personnel Officer, University of Bath, Bath BA2 7AY, quoting reference 79/268/CW. Closing date for applications is 26th May, 1979.

THE OPEN UNIVERSITY
DATA
PROCESSING
DIVISIONOPERATIONS PLANNING
Salary up to £6,000

The Open University, founded in 1969, is now a major force in higher education. It has pioneered new forms of undergraduate and post-experience education, and its future plans include developments requiring a similar level of innovation.

Data Processing has been fundamental to the growth of the University and is scheduled to play a major part in its continuing development.

The Operations Planning Section plays a vital role in representing Data Centre interests in the early development of systems, in facilitating the hand-over of newly developed systems for live operation and in supporting accepted systems on a continuing basis.

Applications are invited from persons who have experience of programming and computer system design, preferably with knowledge of University 1100. Career development prospects are good and in addition we offer a good holiday provision; rural location with houses available to rent or to purchase at reasonable prices; sport/social facilities.

Application forms and further particulars are available from: The Recruitment Office (J02479/2), The Open University, P.O. Box 75, Welton Hall, Milton Keynes MK7 6AL, or telephone Milton Keynes 63868. 24-hour answering service. Closing date for applications: 25th May.

UPDATE YOUR
PERSONAL SOFTWARE

BSc Computing (part-time)

If you're working in computing then you know it's an industry with a big future. But what about your future? Is your career progressing as quickly as you'd like? Do you need more knowledge and training? The best place to get that knowledge is on the part-time BSc computing course at PCL. It's a course for anyone involved with computing, mathematics, statistics or operational research in commerce or industry. Why PCL? The Polytechnic combines comprehensive modern facilities with a long history of excellence in education. Our high standards are respected, not only by academics, but also by Government and industry. Why the part-time BSc? PCL is unique in London in offering a day-release degree course in computing. Spread over four years, the course takes up one day and two evenings a week. This allows you to continue your job while equipping new training. The course gives a good basic knowledge of computing and programming in a variety of fields, and includes: Principles of Computing, Data Processing, Systems Analysis, Hardware, Software Programming, Data Base Design, Management Techniques and Operational Research. Entry requirements: Normally you will need O'Level A in five subjects including Mathematics, or an O'Level in Science or Engineering. But if you're a mature person with the right experience, these entry requirements may be relaxed. Find out more. For full details of the course, write today to:

The Polytechnic
of Central London

UNIVERSITY OF ABERDEEN
COMPUTING CENTRE

The Centre operates a large Honeywell dual processor 88-80 computer with a large terminal network.

Applications are invited for the following posts:

- 1 SYSTEMS PROGRAMMER**
To join the group responsible for the development and support of the systems software. Applicants should have a good honours degree in Statistics, Mathematics or Science and experience in programming in a high level language. Preference will be given to candidates with experience of statistical or numerical applications and an interest in software package development.
- 2 PROGRAMMING ADVISER**
To join the team responsible for the development of application software and the user advisory service. Applicants should have a good honours degree in Statistics, Mathematics or Science and experience in programming in a high level language. Preference will be given to candidates with experience of statistical or numerical applications and an interest in software package development.

Salary in each case on Grade 1A scale, £4,232-£7,145, rising to £4,333 to £7,521 per annum on 1.10.79, with appropriate grading.

Further particulars from The Secretary, The University, Aberdeen, with whom applications (2 copies) should be lodged by 1 June 1979.

REAL-TIME MINI-COMPUTER SPECIALISTS

COULD YOU TEACH?

JOHN BELL offers a flexible and comprehensive training service for its clients, either on their premises or in our offices in Fleet and Cantral London. Lecturers are highly specialised consultants who keep their knowledge up-to-date by spending a large percentage of their time working on a number of varied projects.

Courses presented have included operating systems for PDP 11s, GEC4000 Series and Sperry Univac V77, various ASSEMBLER languages, CORAL 66, RTL/2, programming techniques, MASCO and micro-appreciation.

We are now looking for computer professionals who feel able and willing to assist our training department in course preparation, presentation and related consultancy. Salary would be to £8,000 plus the usual fringe benefits and excellent career prospects.

Applicants should have a sound technical background and the ability to communicate well with people at all levels.

If you would like to combine an involvement in consultancy with the challenges and responsibilities offered by a rapidly expanding training department, then contact us now for further information.
